Notes

(blank) Data element not reported or missing.

+ Occurred on one or more previous dates during the month. The date in the Date field is the last day of occurrence. Used through December 1983 only.

A Accumulated amount. This value is a total that may include data from a previous month or months or year (for annual value).

B Adjusted total. Monthly value totals based on proportional available data across the entire month.

E An estimated monthly or annual total.

X Monthly means or totals based on incomplete time series. 1 to 9 days are missing. Annual means or totals include one or more months which had 1 to 9 days that were missing.

T Trace of precipitation, snowfall, or snowdepth. The precipitation data value will equal zero.

Elem Element types are included to provide cross-reference for users of the NCDC CDO system.

Station Station is identified by: COOP ID, Station Name, State

S Precipitation amount is continuing to be accumulated. Total will be included in a subsequent monthly or yearly value. Example: Days 1-20 had 1.35 inches of precipitation, then a period of accumulation began. The element TPCP would then be 00135S and the total accumulated amount value appears in a subsequent monthly value.

* Annual value missing; summary value computed from available month values.

Notes

(blank) Data element not reported or missing.

+ Occurred on one or more previous dates during the month. The date in the Date field is the last day of occurrence. Used through December 1983 only.

A Accumulated amount. This value is a total that may include data from a previous month or months or year (for annual value).

B Adjusted total. Monthly value totals based on proportional available data across the entire month.

E An estimated monthly or annual total.

X Monthly means or totals based on incomplete time series. 1 to 9 days are missing. Annual means or totals include one or more months which had 1 to 9 days that were missing.

T Trace of precipitation, snowfall, or snowdepth. The precipitation data value will equal zero.

Elem Element types are included to provide cross-reference for users of the NCDC CDO system.

Station Station is identified by: COOP ID, Station Name, State

S Precipitation amount is continuing to be accumulated. Total will be included in a subsequent monthly or yearly value. Example: Days 1-20 had 1.35 inches of precipitation, then a period of accumulation began. The element TPCP would then be 00135S and the total accumulated amount value appears in a subsequent monthly value.

* Annual value missing; summary value computed from available month values.

Notes

(blank) Data element not reported or missing.

+ Occurred on one or more previous dates during the month. The date in the Date field is the last day of occurrence. Used through December 1983 only.

A Accumulated amount. This value is a total that may include data from a previous month or months or year (for annual value).

B Adjusted total. Monthly value totals based on proportional available data across the entire month.

E An estimated monthly or annual total.

X Monthly means or totals based on incomplete time series. 1 to 9 days are missing. Annual means or totals include one or more months which had 1 to 9 days that were missing.

T Trace of precipitation, snowfall, or snowdepth. The precipitation data value will equal zero.

Elem Element types are included to provide cross-reference for users of the NCDC CDO system.

Station Station is identified by: COOP ID, Station Name, State

S Precipitation amount is continuing to be accumulated. Total will be included in a subsequent monthly or yearly value. Example: Days 1-20 had 1.35 inches of precipitation, then a period of accumulation began. The element TPCP would then be 00135S and the total accumulated amount value appears in a subsequent monthly value.

* Annual value missing; summary value computed from available month values.

WEATHER

1. ANTICIPATED WEATHER DAYS

   a. Time allowance for inclement weather:

     1) Normal weather conditions shall be considered and included in the planning and scheduling of all weather-sensitive schedule activities. The amount of time allowed for inclement weather is defined in this section. Schedule activity duration(s) shall be formulated with allowance for normal weather conditions. Any activity which could be impacted by normally anticipated inclement weather (precipitation, high or low temperature, wind, etc.), or the effects thereof shall include an adjustment to include the anticipated weather impact from normal

     Weather conditions. "Inclement weather" is a lost workday, caused by inclement weather conditions, and is defined as a day in which the Contractor's planned workforce for a critical path activity cannot work 50 percent or more of the day on an activity on the critical path, thereby resulting in a delay to the critical path.

     2) A "Rain Day" will only be a day where rain precipitation is greater than 0.10" within a 24-hour period as measured at the Salinas Municipal Airport NOAA station.

   b. Weather related delays shall not entitle the Contractor to any additional compensation. The sole remedy of the Contractor shall be to seek a non-compensable extension of time.

2. INCLEMENT WEATHER ALLOWANCE

The County expects the Contractor to include in the duration of their activities an allowance for the average amount of inclement weather that would be expected to occur. The Contractor will find below the historic average data provided by the County to be used in developing the schedule. The normal inclement weather conditions have been determined by an assessment of average historical climatic conditions using the preceding ten (10) year records published by the National Ocean and Atmospheric Administration (NOAA).

Month	Allowance (Work Days)
January	6
February	6
March	6
April	3
May	1
June	0
July	0
August	0
September	0
October	2
November	3
December	6

3.   WEATHER CALENDAR AND ACCOUNTING OF DAYS

    a.   The Contractor shall include a calendar for weather sensitive activities. This calendar shall be a working day calendar that includes the above stated Inclement Weather Allowance and all County holidays. The weather allowance for each month shall be shown as non-working days and spread throughout the corresponding month. The weather calendar shall be assigned to all weather sensitive activities in the schedule.

    b.   The accounting of weather days shall occur once monthly corresponding to the Monthly Schedule Update. The actual non-working days affecting the critical path attributable to weather shall be accounted for in the Weekly Statement of Contract Time, as prepared by the County, independent of the weather allowance. Actual weather days shall be added to the schedule monthly as a one work day schedule activity inserted behind the data date with an actual date equal to the non-working day as reflected in the Weekly Statement of Contract Time. A monthly reconciliation will occur between the inclement weather allowance and actual weather impact, as reflected in the Weekly Statement of Contract Time. Should the Contractor meet all contract requirements for demonstrating unavoidable delay, the Contractor shall be granted a time extension for actual weather impact days, beyond the weather allowance days for the same time period, for activities on the critical path.

    c.   No contract time adjustment shall be made in the event that actual non-working days attributable to weather affecting the critical path DOES NOT exceed the allowance. Unused weather allowance shall become project float.

    d.   No time extensions will be allowed due to inclement weather unless it impacts the Contract Time as demonstrated by a Time Impact Analysis prepared in accordance with Paragraph 1.12 of this Section.
