

**NOTICE OF PUBLIC HEARING  
ON PROPOSED REDUCTIONS IN MEDICAL SERVICES**

The Board of Supervisors of the County of Monterey will conduct a public hearing, pursuant to California Health and Safety Code section 1442.5 (Beilenson Act), on the proposed elimination of and/or proposed reduction in the level of medical services provided by the County. The Beilenson hearing will be held at the following time and place.

**Tuesday, June 5, 2018, at 9:00 a.m.**

**Board of Supervisors Chambers  
168 West Alisal St.  
1st Floor  
Salinas CA 93901**

At the hearing, the Monterey County Board of Supervisors will consider the impact of the proposed reduction and/or proposed elimination of medical services listed in this public notice on Monterey County residents. Public testimony, both oral and written, will be accepted at this hearing.

The Board of Supervisors may approve the proposed reductions and/or eliminations, in whole or in part.

**MONTEREY COUNTY HEALTH DEPARTMENT,  
PUBLIC HEALTH BUREAU**

**1. REDUCE THE COMMUNICABLE DISEASE PREVENTION AND CONTROL PROGRAM.**

*Description:*

This program provides surveillance, investigation, prevention, and control of communicable diseases countywide. The program also provides infection control guidance to child care programs, adult care programs, health care providers, schools, correctional facilities, local hospitals, skilled nursing facilities and restaurants.

*Sites:*

Health Department, 1270 Natividad Rd., Salinas CA 93906.  
Numerous public and private locations countywide.

*Nature of proposed change:*

Reduce the number of employees that prevent the spread of communicable diseases.

*Staff reductions:*

1.0 FTE        Public Health LVN  
1.0 FTE        Public Health Nurse III (underfill PHN II)  
1.0 FTE        Public Health Nurse III

*Persons affected:*

The proposed reduction will lead to delayed detection and treatment of communicable diseases, resulting in more people getting sick and more deaths due to preventable diseases. Individuals who are infected with *Salmonella*, *E. coli* and other enteric illnesses will not be restricted from working and will continue to work in agriculture and food service industries, will contaminate food products and will pass their illnesses to other people. Children with whooping cough, measles and mumps will not be identified and will continue to attend school and will pass their illnesses to teachers and other students. Local medical providers will have no experts to contact for guidance on how to deal with challenging cases such as travelers exposed to Ebola virus or pregnant women exposed to Zika virus. Victims of dog and wildlife bites will not receive the benefit of a public health evaluation of their risk of rabies exposure and may not receive the appropriate treatment to prevent death due to rabies. College students exposed to meningococcal meningitis will not be identified, will not be offered treatment to prevent illness, and may develop meningitis.

Every county resident and visitor will be at increased risk for exposure to infectious diseases.

*Expected annual savings:*

\$430,490.

*Lost Revenue:*

\$0.

**2. ELIMINATE DIRECTLY OBSERVED THERAPY (DOT) SERVICES FOR INDIVIDUALS DIAGNOSED WITH ACTIVE TUBERCULOSIS (TB) DISEASE.**

*Description:*

This program assures that individuals with active TB disease take their TB antibiotics as prescribed by their doctor.

*Sites:*

Health Department, 1270 Natividad Rd., Salinas CA 93906.  
Numerous public and private locations countywide.

*Nature of proposed change:*

Eliminate public health employees that watch and confirm that tuberculosis patients take their prescribed antibiotics.

*Staff reductions:*

2.0 FTE        Community Service Aide IV

*Persons affected:*

Elimination of this program will lead to inadequate treatment of people with TB disease, resulting in an increase in the spread of TB disease in the county. In addition, some people with TB disease will receive incomplete treatment, resulting in more drug-resistant strains of TB circulating among county residents and visitors.

Approximately 26 county residents with TB disease each year will not be observed by public health employees to confirm that they take their antibiotic medications as prescribed. County residents and visitors will be at increased risk for exposure to people with TB disease that is inadequately treated.

*Expected annual savings:*

\$153,762.

*Lost Revenue:*

\$0.

### 3. ELIMINATE THE IMMIGRANT TB SCREENING PROGRAM.

This program provides initial TB screening for new legal immigrants arriving from counties where the incidence of tuberculosis is often very high. These recent immigrants were identified as being at increased risk for TB disease in their country of origin prior to immigration. Rates of TB disease are about 10 times greater among newly arrived immigrants than among individuals born in the United States. The program refers these immigrants to local doctors that then evaluate the immigrant for TB and treat as appropriate.

*Sites:*

Health Department, 1270 Natividad Rd., Salinas CA 93906.  
Numerous public and private locations countywide.

*Nature of proposed change:*

Eliminate public health employees that screen and refer newly arrived legal immigrants with latent TB and infectious TB to health care providers.

*Staff reductions:*

1.0 FTE      Public Health LVN.

*Persons affected:*

Elimination of this program will increase the number of people with undiagnosed infectious TB in Monterey County. More people will get sick and spread the disease to others. Since the rate of drug-resistant TB is high in many countries of origin, the rate of drug-resistant TB is also expected to increase in Monterey County.

Approximately 75 new legal immigrants each year will not be screened by public health officials or referred to health care providers for evaluation and treatment of TB. Health care workers, county residents and visitors will be at increased risk for exposure to undiagnosed cases of infectious tuberculosis.

*Expected annual savings:*  
\$98,260.

*Lost Revenue:*  
\$0.

#### 4. REDUCE COUNTY PUBLIC HEALTH CLINICAL LABORATORY SERVICES.

The Clinical Laboratory provides testing of patient specimens from local hospitals, health care providers and public health officials. The Laboratory tests patient specimens to identify people with *E. coli*, *Salmonella* and other bacteria that cause infectious diarrhea. The laboratory also performs highly complex tests to quickly identify pathogens such as measles virus, influenza virus and Valley Fever. The Laboratory uses test methods that are not available at private laboratories, including genetic typing and drug resistance testing to track and prevent further spread of diseases. The laboratory tests patient specimens from four hospitals to help doctors diagnose and isolate patients with infectious tuberculosis. The laboratory also tests the brains of animals that have bitten people to determine if there has been an exposure to rabies virus.

*Site:*  
Public Health Laboratory, 1270 Natividad Rd., Salinas, CA 93906.

*Nature of proposed change:*  
Reduce the number of public health employees that perform clinical laboratory tests in the Monterey County Public Health Clinical Laboratory.

*Staff reductions:*  
1.0 FTE          Public Health Microbiologist.  
1.0 FTE          Laboratory Assistant.

*Persons affected:*  
Reduction in the Laboratory's level of service will result in decreased health care provider access to prompt laboratory testing, reduced quality of test results and delayed diagnosis and treatment of infectious diseases in Monterey County.

Approximately 2000 patients each year in Monterey County will have their specimens rerouted to laboratories in other counties and will wait longer for confirmation of their diagnosis.

*Expected annual savings:*  
\$148,760.

*Lost Revenue:*  
\$57,550.

#### 5. ELIMINATE THE WHOLE PERSON CARE CASE MANAGEMENT PROGRAM.

*Description:*

This nurse home visitation program provides comprehensive case management to homeless county residents that also suffer from mental illness, substance abuse and chronic medical conditions. Nurses conduct comprehensive health assessments and develop case management plans. Nurses also provide vaccinations, refer clients to homeless services agencies for housing placement, and assist clients in seeking primary care and specialty care services. The program increases patient access to primary care, decreases utilization of ambulance and emergency room services, decreases hospitalizations and decreases the cost of health care for the county's most vulnerable residents.

*Sites:*

Health Department, 1270 Natividad Rd., Salinas CA 93906.

Numerous private residence locations countywide

Numerous homeless encampments countywide.

*Nature of proposed change:*

Eliminate public health employees that provide comprehensive case management to homeless individuals that struggle with mental illness, drug addiction and poor health.

*Staff reductions:*

4.0 FTE Public Health Nurse II (2.0 FTE underfilled with Clinic Nurse).

1.0 FTE Behavioral Health Aide.

4.0 FTE Public Health LVN.

1.0 FTE Supervising Public Health Nurse.

1.0 FTE Office Assistant III.

*Persons affected:*

Elimination of the program will terminate comprehensive case management for up to 600 homeless individuals with mental illness, substance abuse disorders and chronic medical conditions.

*Expected annual savings:*

\$775,000.

*Lost Revenue:*

\$591,286.

**6. ELIMINATE ONE NURSE HOME VISITATION SUPERVISING PUBLIC HEALTH NURSE.**

*Description:*

This public health employee provides vaccinations and supervises public health nurses that conduct nurse home visitations for pregnant women, mothers and their babies. Women that receive these services develop better parenting skills, are more likely to delay subsequent pregnancies, and more likely to graduate from high school. The babies of these women are less likely to fall victim to child abuse or neglect.

*Sites:*

Health Department, 1270 Natividad Rd., Salinas CA 93906.  
Numerous private residence locations countywide.

*Nature of proposed change:*

Eliminate one public health employee that provides and supervises delivery of comprehensive case management to women and their babies.

*Staff reduction:*

1.0 FTE          Supervising Public Health Nurse.

*Persons affected:*

Elimination of the position will result in a reduction in the number of mothers and children vaccinated against influenza and other infectious diseases, and will decrease supervision of public health nurses.

*Expected annual savings:*

\$94,000.

*Lost Revenue:*

\$67,726.
