## Background

There is a renewed focus on roads and transportation in Monterey County as well as California as a whole. Remarkable changes in the transportation funding picture have been observed with the recent passage of Measure X and the Road Maintenance and Rehabilitation Act (RMRA). Combined, these two funding sources will inject more than \$12 million a year into the county.

With increased revenue comes increased accountability. Measure X requires each agency to develop a pavement management program (PMP) and submit reports on road conditions to ensure timely repairs and keep the public informed. Access to RMRA funds requires agencies to submit project lists and expenditure reports for approval by the California Transportation Commission (CTC). A robust PMP will not only aid in funding applications and accountability to state officials but will also provide transparency and accountability to local residents. To accomplish these purposes, the Transportation Agency for Monterey County (TAMC) selected Nichols Consulting Engineers, Chtd. (NCE) to assist Monterey County (County) in developing their own PMP.

A PMP is “*designed to provide objective information and useful data for analysis so that...managers can make more consistent, cost effective, and defensible decisions related to the preservation of a pavement network.*”<sup>1</sup> PMPs, therefore, are designed to assist managers with the decision-making process by answering questions such as:

- What does the County’s pavement network consist of?
- What is the existing condition of the pavement network?
- How will the condition of the pavement network change over time given the existing funding?
- How much funding is required to maintain the pavement network at the current condition level?
- Is the the current condition level acceptable? If not, what is an acceptable level, and how much funding is required to achieve it?
- What maintenance and rehabilitation (M&R) strategies are available to help maintain or improve the condition of the pavement network?
- What are the maintenance priorities under different budget constraints?

---

<sup>1</sup> AASHTO “Guidelines for Pavement Management Systems”. American Association of State Highway and Transportation Officials, Washington, DC, July 1990.

## Purpose

The purpose of this report is to assist decision makers in optimizing the use of available pavement management funds and detail the adequacy of projected revenues to meet maintenance and rehabilitation needs. This is accomplished by maximizing the return from expenditures by:

- 1) Implementing a multi-year road maintenance and rehabilitation plan,
- 2) Developing a preventive maintenance plan, and
- 3) Selecting road segments and projects with the most cost-efficient return.

This report examines the overall condition of the pavement network and highlights options for improving the network pavement condition index (PCI). These options were developed by varying the budget amounts available for pavement maintenance and rehabilitation and illustrates how different funding strategies will affect the condition of the pavement network over the next 10 years.

## Project Approach

NCE recommended and assisted the County in setting up StreetSaver<sup>®</sup> as a PMP decision support tool. StreetSaver<sup>®</sup> is a computer-based program developed by the Metropolitan Transportation Commission (MTC) to help agencies better maintain their roads and streets and is widely used by cities and counties throughout California.

In September 2018, NCE completed condition surveys of the County's paved pavement network. The network was divided into pavement sections and all section and distress data were recorded in the StreetSaver<sup>®</sup> database. The condition surveys were performed using MTC distress protocols<sup>2</sup> and did not include non-pavement issues such as traffic, safety and road hazards, geometric issues, shoulders, sidewalks, curb and gutters, drainage issues, or immediate maintenance needs.

After data collection, NCE reviewed current M&R strategies with County staff. This included the selection of appropriate treatments such as surface seals or overlays, and the determination of unit costs. The unit costs are based on recent bid tabs from the County and neighboring agencies and include all construction, engineering, and design costs. Once appropriate M&R treatments were identified, a decision tree was created.

NCE performed a budget needs analysis using an analysis period of ten years with an annual inflation rate of three percent. This identified M&R requirements for each pavement section and determined the total M&R needs for the analysis period. Finally, four budget scenarios were analyzed, also for a ten-year period.

---

<sup>2</sup> Pavement Condition Index Distress Identification Manuals for Flexible (4<sup>th</sup> Edition) and Rigid Pavements (3<sup>rd</sup> Edition), Metropolitan Transportation Commission, San Francisco, CA, March 2016

## Road Network Description

Monterey County is responsible for maintaining approximately 1231 centerline miles of roads. During inspection, the surface type of the paved roads (as indicated in the County-provided shapefile) was field verified and the paved roads were then inspected. During this process, approximately 41 miles of roads that were classified as paved in the County’s shapefile were identified as gravel. These sections were included in the inventory database with the surface type as gravel. The other unpaved roads (as indicated in the County shapefile) were not included in the inventory database. The majority of the paved-road network is composed of asphalt concrete (AC) sections, but 6 sections are Portland Cement Concrete (PCC), 1 section is composite (AC over PCC), and 41 sections are surface treated. Table 1 summarizes the road network by functional class and lists the gravel sections separately. Note the gravel sections were not included in the analyses.

**Table 1: Network Summary Statistics for Road Network**

Functional Class	Sections	Centerline Miles	% of the Entire Network (by Pavement Area)
<b>Arterials</b>	33	16.5	2.3%
<b>Collectors</b>	527	372.6	38.5%
<b>Residential</b>	1721	705.8	59.2%
<b>Total</b>	<b>2281</b>	<b>1094.9</b>	<b>100%</b>
<b>Gravel</b>	-	136.3	-

**The network replacement cost is estimated to be approximately \$1.1 billion.** This can be viewed as the value of the pavement network and is the amount needed to fund a full reconstruction of the road network. It does not include related infrastructure assets such as sidewalks, signals, markings, signs, etc.

## Pavement Current Condition

The pavement condition index, or PCI, is a measurement of the pavement condition and ranges from zero to 100. A newly constructed road has a PCI of 100, while a failed road has a PCI of 25 or less. A pavement’s condition is affected by the environment, traffic loads and volumes, construction materials, and age. The deterioration of the pavement is classified in terms of distresses. The distresses describing the deterioration of AC and PCC pavements are:

### Asphalt Concrete Distresses

1. Alligator or Fatigue Cracking
2. Block Cracking
3. Distortions
4. Longitudinal/Transverse Cracking
5. Patching and Utility Cuts
6. Rutting and Depressions
7. Raveling
8. Weathering

### Portland Cement Concrete Distresses

1. Corner Break
2. Divided Slab
3. Faulting
4. Longitudinal/Transverse Cracking
5. Patching and Utility Cuts
6. Scaling/Map Cracking/Crazing
7. Spalling

The PCI scale is divided into five condition categories as shown in Figure 1. Roads in “Fair” condition are further separated into non-load-related (e.g. weathering) and load-related (e.g. alligator cracking) categories based on distress types. Load-related distresses are markedly different from non-load-related distresses. Consequently, the treatments used to address these condition categories are different, as are their associated costs. Generally, roads with load-related distress are more expensive to repair. The two “Fair” condition categories are II (non-load-related) and III (load-related). Note that the StreetSaver® “Maintenance and Rehabilitation Decision Tree” in Appendix B assigns different condition category titles from those in Figure 1.

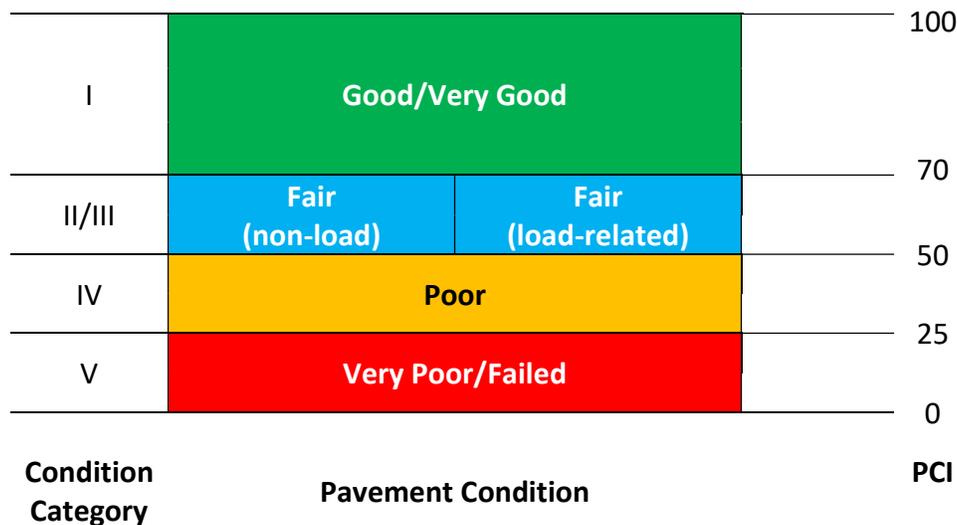

Figure 1: Pavement Condition Categories by PCI

Figure 2 shows photos of roads with different PCIs. A list of all sections in the network along with their attributes, including PCI at the time of inspection, is provided in Appendix A. For convenience, there are two listings – one sorted alphabetically by road name and the other sorted by descending PCI.

Figure 2: Examples of Roads with Different PCIs

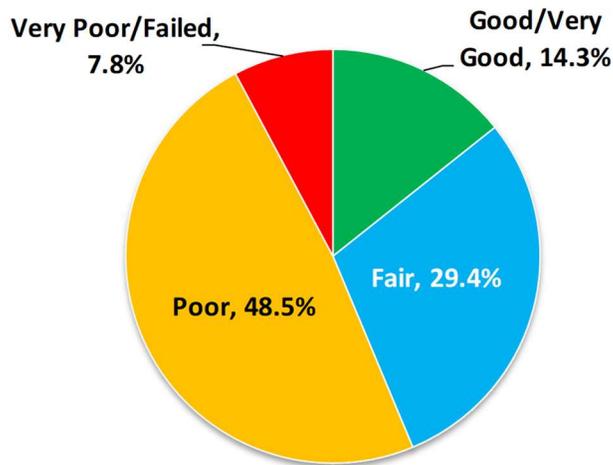

**The current average PCI for the County’s road network is 48.** This value is an area-weighted calculation performed in StreetSaver®. For a given pavement section, the remaining service life (RSL) is the time it takes to deteriorate to “Very Poor/Failed” condition if no maintenance occurs. **The average RSL for the network is estimated to be approximately 8 years.**

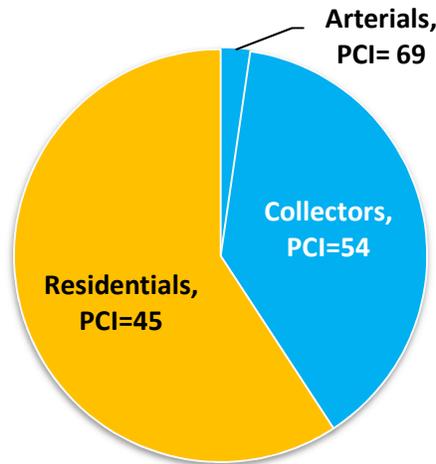

Table 2 as well as Figures 3 and 4 breakdown the network pavement condition by condition category and functional classification, respectively. Approximately 14.3 percent of the County’s roads are in Good/Very “Good” condition with approximately one-third in “Fair” condition. Over half of the County’s roads are in either “Poor” or “Very Poor/Failed” condition. The PCI for arterials is the highest at 69, while the PCIs for collectors and residentials are 54 and 45, respectively.

**Table 2: 2018 Pavement Condition Breakdown by Area (Entire Network)**

Condition Category	PCI Range	Arterials (%)	Collectors (%)	Residentials (%)	Entire Network (%)
Good (I)/Very Good	70-100	1.2	8.6	4.5	14.3
Fair (II/III)	50-69	0.7	13.0	15.7	29.4
Poor (IV)	25-49	0.3	14.7	33.5	48.6
Very Poor/Failed (V)	<25	0.1	2.2	5.5	7.8
<b>Total</b>		<b>2.3</b>	<b>38.5</b>	<b>59.2</b>	<b>100.0</b>

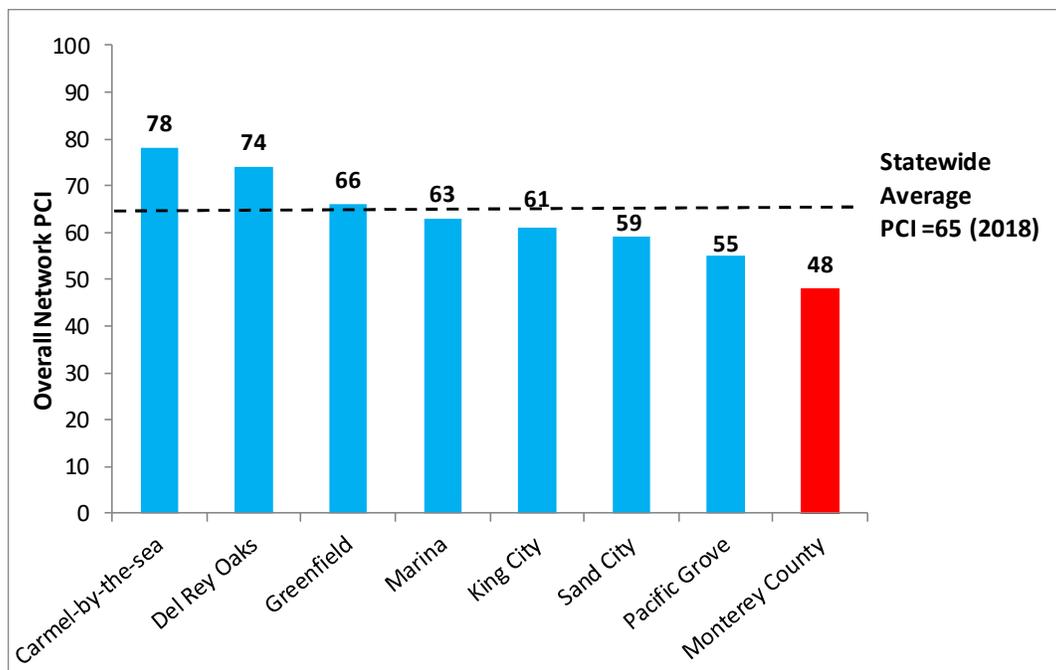

**Figure 3: Pavement Network Breakdown by Condition Category**

**Figure 4: Pavement Network Breakdown by Functional Classification**

Figure 5 shows the County’s network PCI compared to the PCIs of neighboring agencies. The presented data was also collected and analyzed by NCE in partnership with TAMC on behalf of the listed agencies. Additionally, the statewide average PCI from the 2018 California Statewide Local Streets and Roads Needs Assessment<sup>3</sup> is also included for comparison. As illustrated, the County’s network PCI is the lowest among the TAMC agencies and is below the statewide average.

**Figure 5: 2018 Pavement Condition Index Compared to Neighboring Agencies**

<sup>3</sup> “California Statewide Local Streets and Roads Needs Assessment 2018 Update”. Nichols Consulting Engineers Chtd, CA, October 2018.

## Maintenance and Rehabilitation Strategies

NCE recommends using seals such as chip, cape, and slurry as preventive maintenance strategies when pavements are in “Good/Very Good” and “Fair” (non-load) condition, then applying HMA overlays as the pavement condition deteriorates to “Fair” (load-related) condition. Digouts are recommended to prepare the pavement structure prior to an overlay or seal as necessary. Finally, as the pavement deteriorates to “Poor” or “Very Poor/Failed” condition, NCE recommends cold-in-place recycling (CIR) with an overlay. These recommended treatments are formalized in the M&R decision tree presented in Appendix B.

Figure 6 illustrates the relevance of the colloquial saying: “pay me now, or pay me more later”, to pavement management. History and research have shown that it costs much less to maintain roads in good condition than to repair roads that have failed. By allowing pavements to deteriorate, roads that once cost \$10.00 per square yard (\$/SY) to chip seal may soon cost \$45.00/sy to overlay or \$73.00/sy to recycle and overlay. In other words, significant delays in repairs can significantly increase management costs.

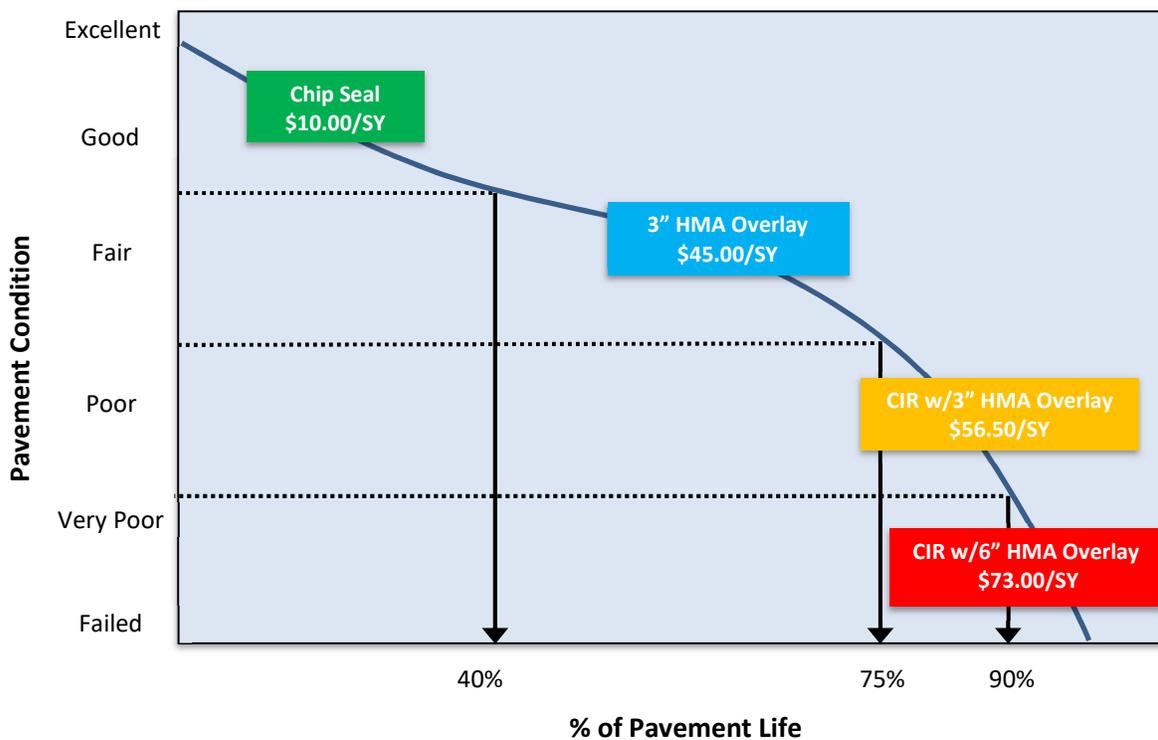

Figure 6: Costs of Maintaining Pavements over Time

## Budget Needs

After the pavement condition of the network has been determined and appropriate maintenance treatments have been identified, then the funding needs for the County’s roads can be determined. Simplistically, a budget needs analysis seeks to answer the following question:

**If funding is not a constraint, how much money is needed to bring the network pavement condition to a state of good repair?**

Based on the principle that it costs less to maintain roads in good condition than it does to repair or reconstruct those in bad condition, effective PMPs employ a maintenance strategy that brings the overall condition of the network to an optimal PCI and then maintains it. By not addressing maintenance needs, the condition of the network will inevitably decline. In order to correct such deficiencies, a cost-effective M&R strategy must be implemented.

The first step in developing a cost-effective M&R strategy is to determine the maintenance needs of the pavement network. The maintenance needs represent the cost associated with performing all M&R treatments at the optimal time. This was done by performing a budget needs analysis in StreetSaver® with an inflation rate of three percent, the results of which are listed in Table 3. **The total maintenance needs for the County’s network over the next ten years is estimated at \$644.2 million.** Of the total \$644.2 million in maintenance needs, approximately \$74.5 million (11.6 percent) is marked for preventive maintenance, while the majority (88.4 percent) is allocated for more costly rehabilitation and reconstruction treatments.

**Table 3: Summary Results for Needs Analysis**

Year	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	Total
<b>PCI Treated</b>	77	74	72	70	68	67	66	65	74	72	--
<b>PCI Untreated</b>	48	46	43	40	37	33	30	27	24	21	--
<b>Needs (\$Millions)</b>	360.7	6.0	5.0	1.0	5.5	18.7	17.3	19.5	206.7	3.8	644.2

If the County follows this ideal strategy, the average network PCI would immediately increase as a large amount of deferred maintenance is addressed in the first year, and then stabilize at a maintainable level in the 70s. This type of budget, that addresses all the deferred maintenance (unfunded backlog) in the first year, is known as front-loaded. If no maintenance is performed in the next ten years, the network PCI will drop to 21 by 2028.

Note that this and other prediction models do not incorporate the impacts of newer and more cost-effective technologies. For example, if more effective materials are used, such as asphalt-binders with rubber or polymers, the actual performance of these treatments may not be adequately modeled. Consequently, NCE recommends regular pavement condition surveys to ensure model accuracy and relevance.

## Budget Scenarios

Having determined the maintenance needs of the County's network, the next step in developing a cost-effective M&R strategy is to conduct budget scenario analyses. In consultation with the County, four funding scenarios were selected for analysis and performed using StreetSaver®:

**Scenario 1: County's Existing Funding (\$240 million/10 years)** –This scenario is based on the County's existing funding level of \$24 million per year for the next ten years. The analysis for this scenario estimates that at the end of ten years the PCI will drop to 42, the deferred maintenance will increase to \$608.7 million, and the average RSL for the network will be 11 years.

**Scenario 2: Maintain PCI at 48 (\$309 million/10 years)** – This scenario aims to maintain the pavement condition of the network at the current PCI of 48. The analysis for this scenario estimates that the required funding is approximately \$309 million over the next ten years. The deferred maintenance will be \$533.1 million and RSL will increase to 14 years.

**Scenario 3: Increase PCI to 70 (\$600 million/10 years)** – This scenario aims to increase the network PCI to 70 by the end of the ten-year analysis period. The estimated funding required for this scenario is approximately \$599.9 million over the next ten years. This will decrease the deferred maintenance to \$191.6 million and increase the RSL to 21 years.

**Scenario 4: Best Management Practice (\$725 million/10 years)** – This scenario aims to achieve a maintainable network over the next ten years by bringing the network PCI to a maintainable level in the 70s. The analysis for this scenario estimates that the required funding is approximately \$724.9 million over the next ten years. This will increase the PCI to 79 and the RSL to 23 years.

By examining these scenarios, the advantages and disadvantages of various funding levels and maintenance strategies become clearer. These scenarios are discussed in greater detail in the following sections and the full results of the budget needs analysis as well as of each scenario are provided in Appendix C.

Note: The term “deferred maintenance” includes pavement maintenance activities that are needed, but not performed due to insufficient funding. Shrinking budgets have forced many cities and counties to defer much needed pavement maintenance. Deferring maintenance activities not only increases the frequency of citizens' complaints about the condition of the network, but also increases the cost of repairing these roads.

A map illustrating the current condition of the pavement network is provided in Appendix E. Also included in Appendix E are maps for each scenario illustrating the projected condition of the pavement network at the end of the analysis period (2028). Each map shows the pavement network and highlights the condition category of each pavement section.

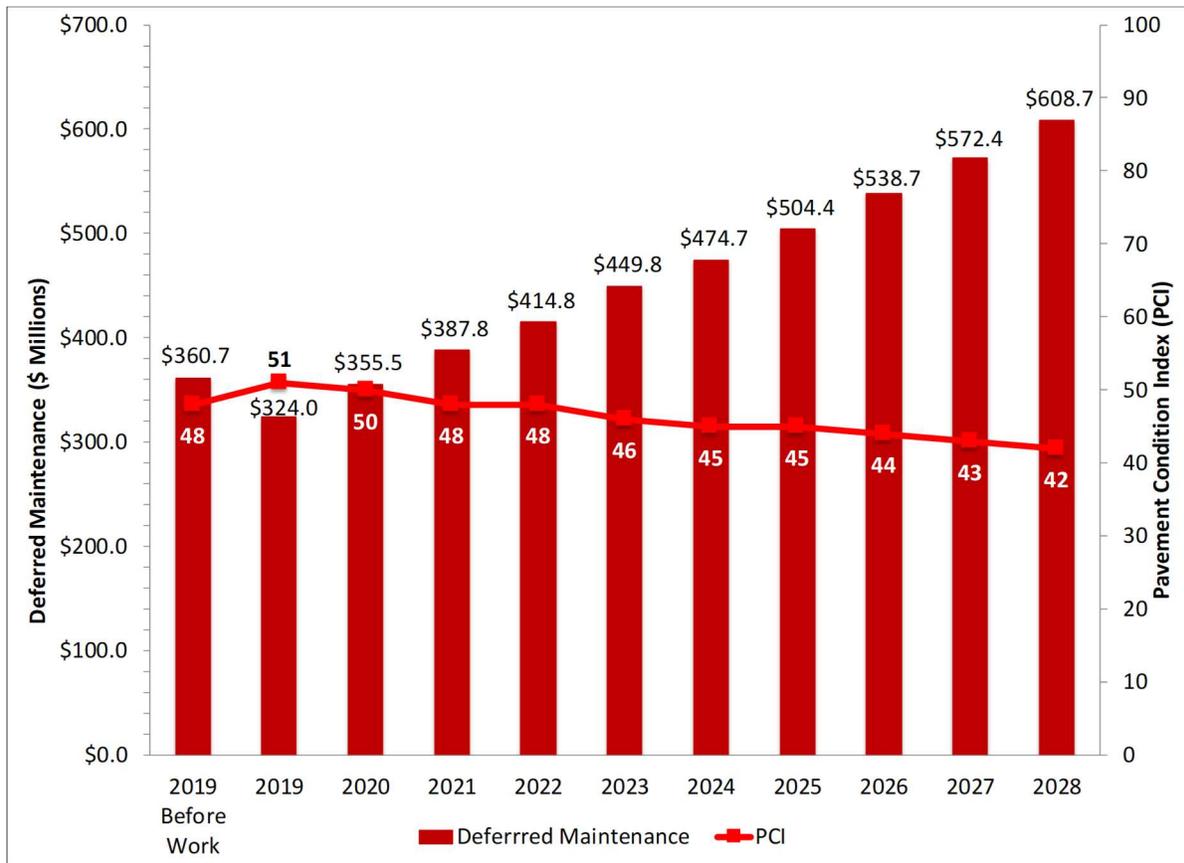

### Scenario 1: County’s Existing Funding (\$240 million/10 years)

This scenario is based on the County’s existing funding of \$24 million per year for the next ten years. As shown in Table 4 and Figure 7, the network PCI will drop to 42 by 2028 and the deferred maintenance will increase to \$608.7 million. The RSL will be 11 years by 2028 and approximately 59.7 percent of the network will be in “Very Poor/Failed” condition by 2028. Appendix D lists the candidate sections selected for treatment under Scenario 1.

**Table 4: Summary Results for Scenario 1**

Year	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	Total
<b>Budget (\$Millions)</b>	24.0	24.0	24.0	24.0	24.0	24.0	24.0	24.0	24.0	24.0	240.0
<b>Deferred Maint. (\$Millions)</b>	324.0	355.5	387.8	414.8	449.8	474.7	504.4	538.7	572.4	608.7	--

<b>RSL (Years)</b>	9	9	9	10	10	10	10	11	11	11	--

**Figure 7: PCI vs Deferred Maintenance for Scenario 1**

## Scenario 2: Maintain PCI at 48 (\$309 million/10 years)

This scenario aims to maintain the pavement condition of the network at the current PCI of 48 and estimates the funding required to do so, as well as the corresponding deferred maintenance and average RSL for each year in the analysis period. As shown in Table 5 and Figure 8, an estimated budget of \$309 million over 10 years is required to maintain the desired PCI level. By 2028, approximately 42.2 percent of the network will be in “Good/Very Good” condition, the RSL will have increased to 14 years, and the deferred maintenance will be \$533.1 million.

Table 5: Summary Results for Scenario 2

Year	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	Total
<b>Budget (\$Millions)</b>	24.0	24.0	24.0	30.0	32.0	35.0	35.0	35.0	35.0	35.0	309.0
<b>Deferred Maint. (\$Millions)</b>	324.0	355.5	387.8	408.8	435.6	452.0	470.1	492.3	512.5	533.1	--

<b>RSL (Years)</b>	9	9	9	10	11	11	12	13	13	14	--

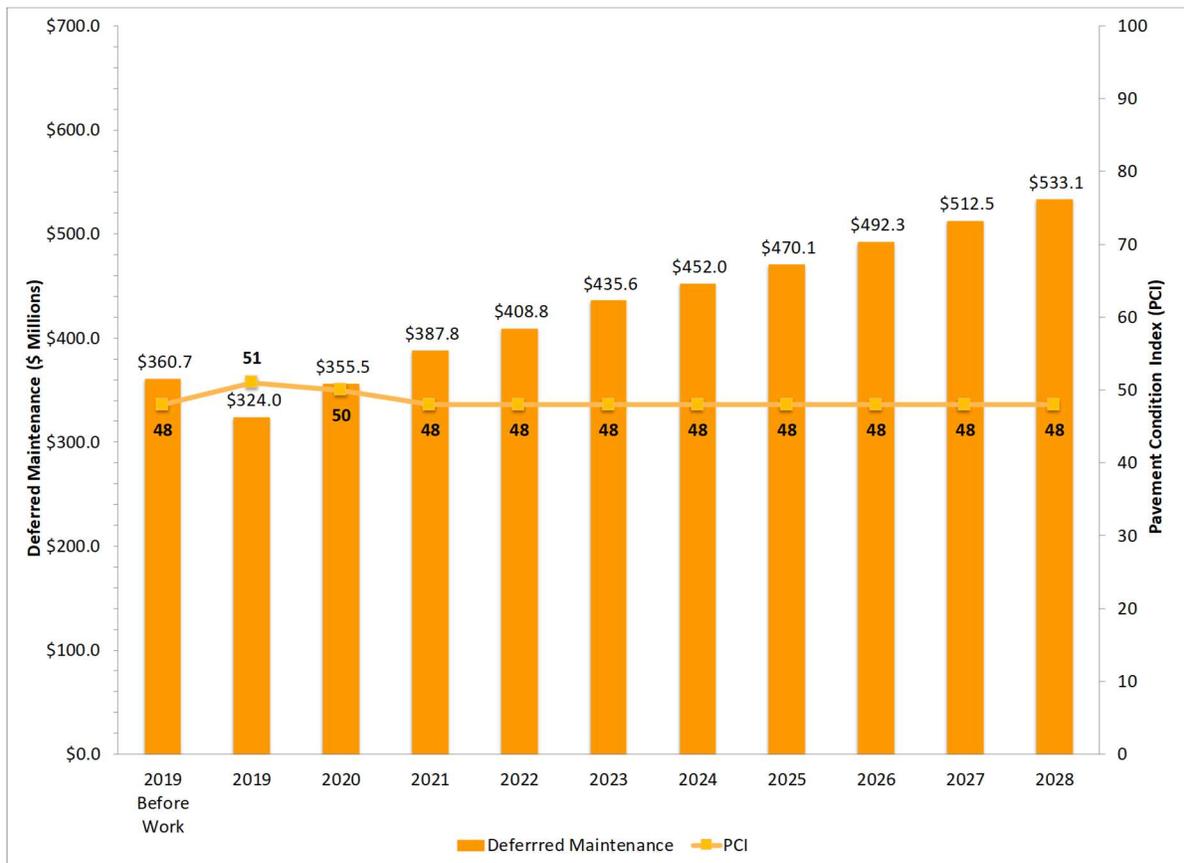

Figure 8: PCI vs Deferred Maintenance for Scenario 2

### Scenario 3: Increase PCI to 70 (\$600 million/10 years)

This scenario aims to increase the pavement condition of the network to reach a PCI of 70 by the end of the analysis period. As shown in Table 6 and Figure 9, a total budget of \$599.9 million is required for this scenario. By 2028, almost three-fourths of the network will be in “Good/Very Good” condition, the RSL will have increased to 21 years and the deferred maintenance will be \$191.6 million.

Table 6: Summary Results for Scenario 3

Year	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	Total
<b>Budget (\$Millions)</b>	24.0	64.0	64.0	64.0	64.0	64.0	63.9	64.0	64.0	64.0	599.9
<b>Deferred Maint. (\$Millions)</b>	324.0	315.5	306.6	291.2	282.4	261.9	245.3	226.2	200.9	191.6	--
<b>PCI</b>	51	53	56	58	59	61	63	65	67	70	--
<b>RSL (Years)</b>	9	11	13	14	16	17	18	19	20	21	--

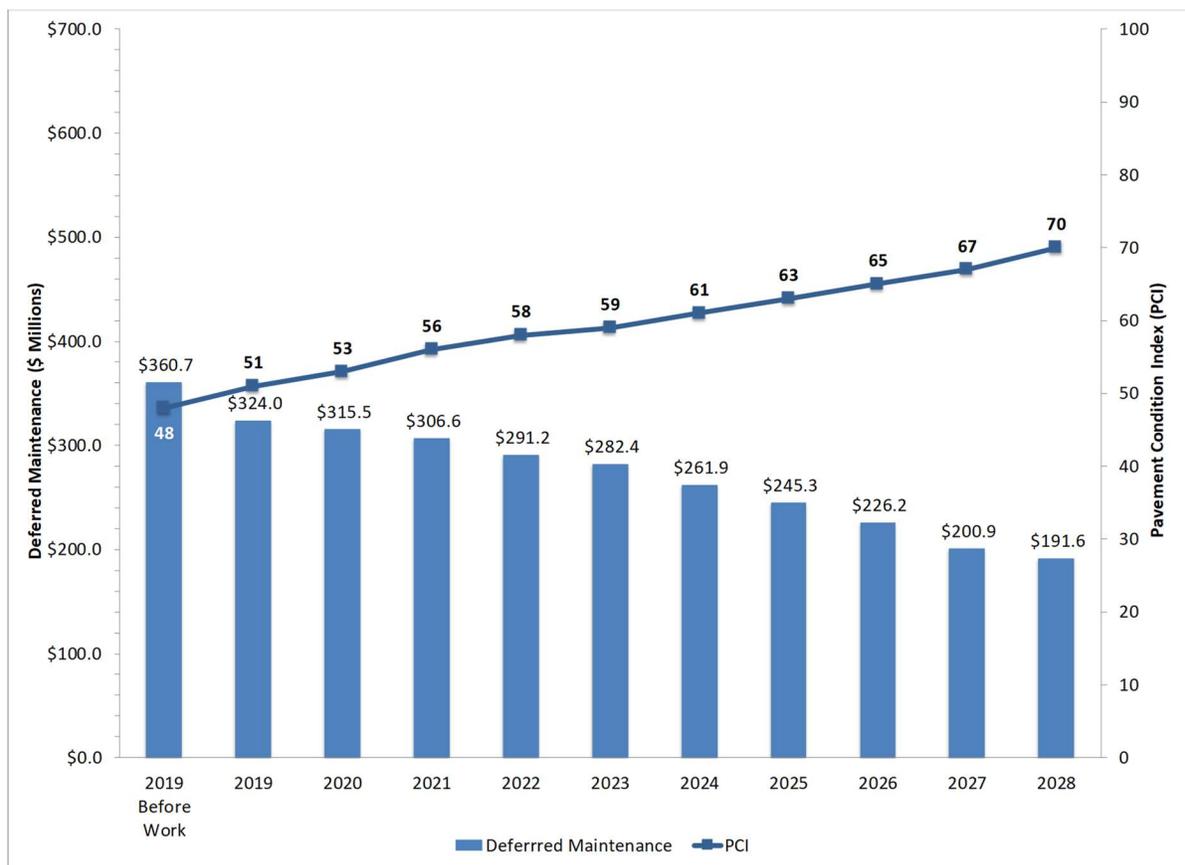

Figure 9: PCI vs Deferred Maintenance for Scenario 3

### Scenario 4: Best Management Practice (\$725 million/10 years)

This scenario aims to reach an average PCI in the high 70s and eliminate the deferred maintenance over the analysis period. This strategy will allow the pavement network to be maintained with preventive maintenance practices in subsequent years. As shown in Table 7 and Figure 10, the estimated budget is \$724.9 million over the ten-year analysis period. By 2028 the PCI will be 79, the RSL will have increased to 23, and approximately 80.1 percent of the network will be in “Good/Very Good” condition. Due to scheduled seal cycles, there will be \$24.6 million in deferred maintenance by 2028.

Table 7: Summary Results for Scenario 4

Year	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	Total
<b>Budget (\$Millions)</b>	85.0	85.0	85.0	85.0	95.0	95.0	40.9	44.0	50.0	60.0	724.9
<b>Deferred Maint. (\$Millions)</b>	263.0	231.7	199.3	159.6	113.7	47.9	38.8	28.8	25.1	24.6	--

<b>RSL (Years)</b>	12	14	15	17	19	20	21	21	22	23	--

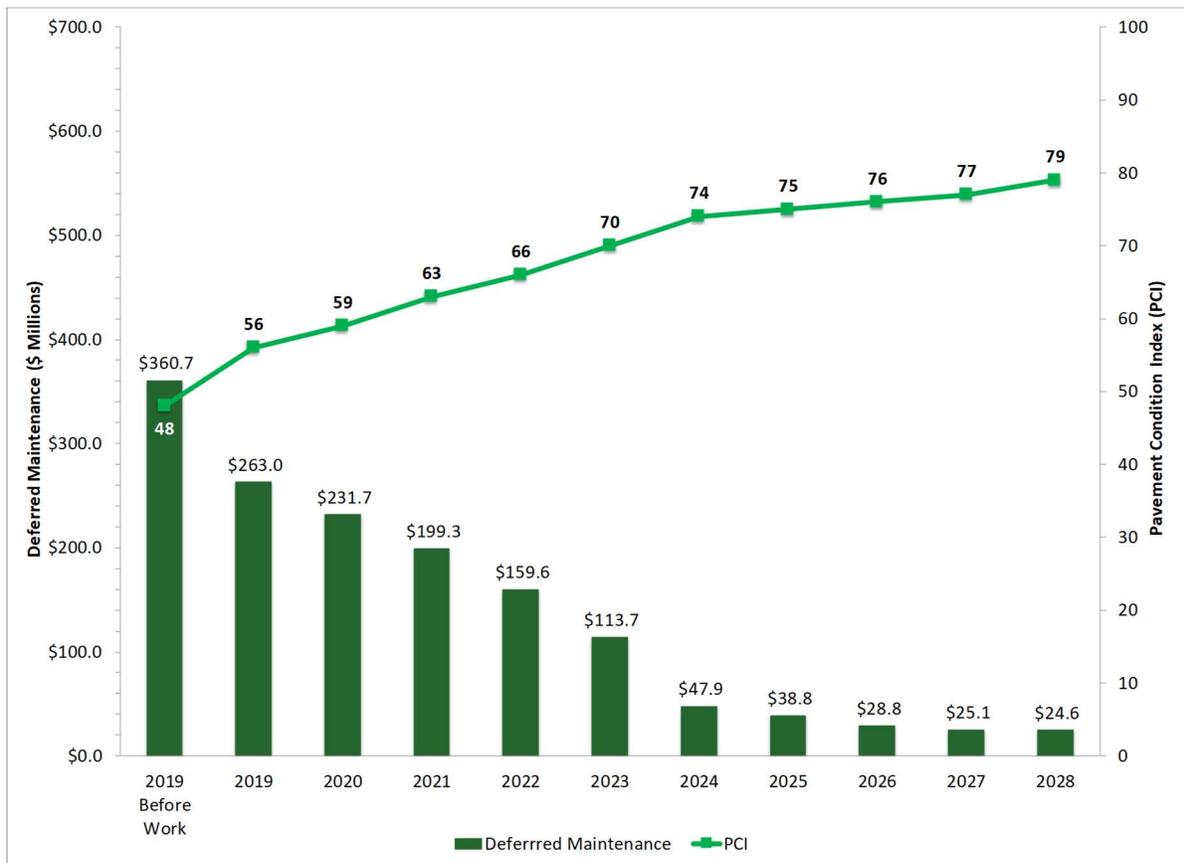

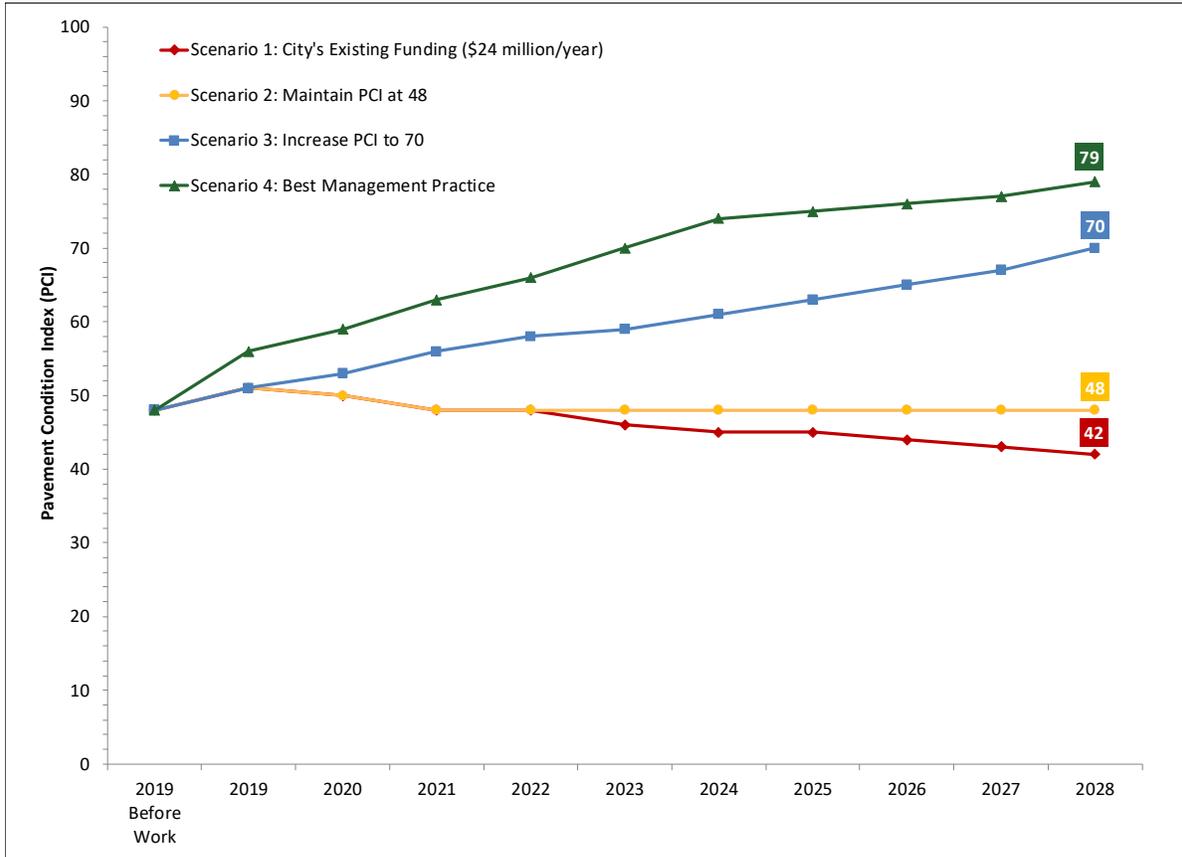

Figure 10: PCI vs Deferred Maintenance for Scenario 4

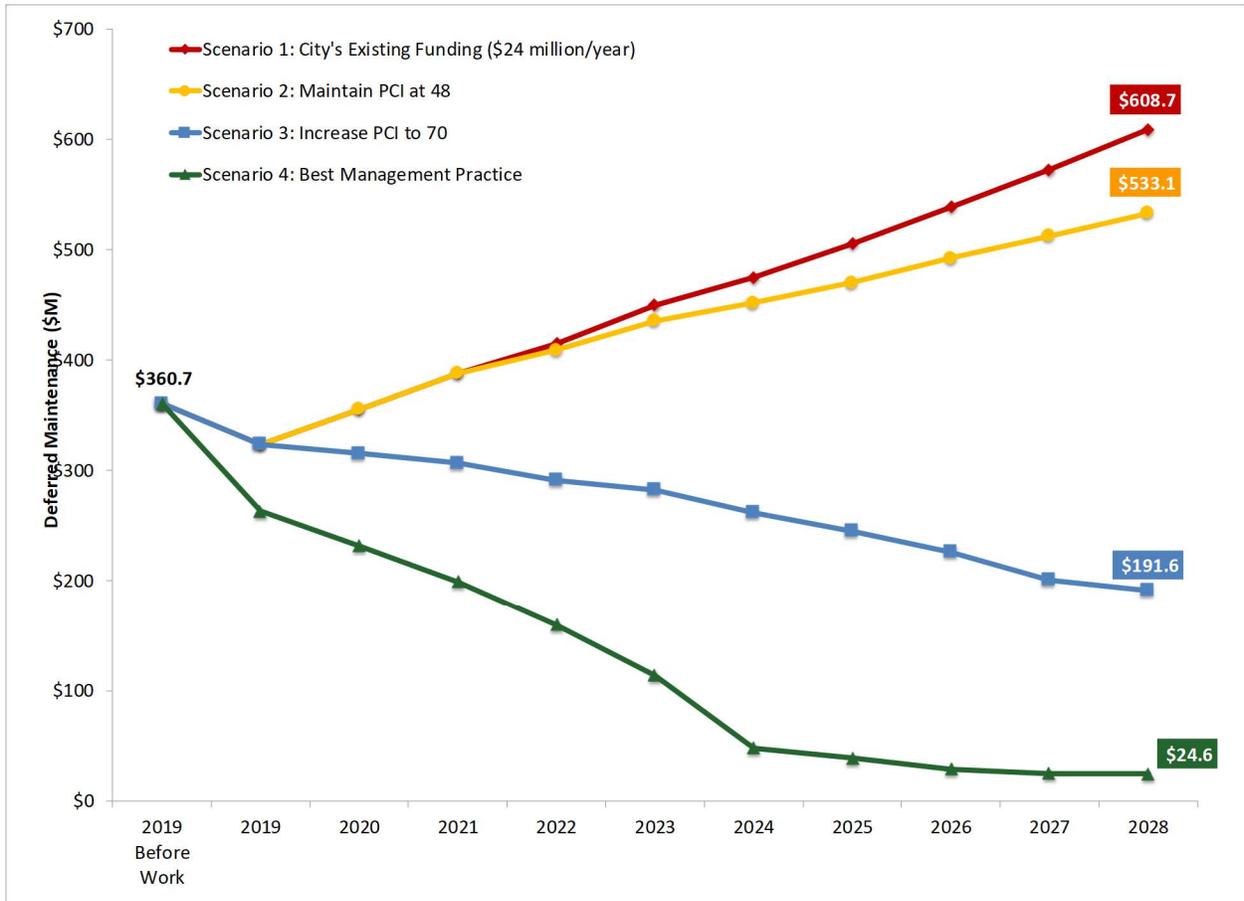

## Scenario Comparisons

Figure 11 graphically compares the annual changes in PCI for each of the three scenarios. As previously noted, the PCI will fall to 42 under Scenario 1, remain 48 under Scenario 2, and increase to 70 under Scenario 3, and increase to 79 under Scenario 4.

**Figure 11: Annual Pavement Condition Index for Scenarios 1 to 4**

Figure 12 illustrates the changes in deferred maintenance over time for each scenario. Scenario 1, the County's existing funding, will see the deferred maintenance significantly increase over time. Scenario 2 slightly will also increase the deferred maintenance. However, both Scenarios 3 and 4 will decrease the deferred maintenance.

**Figure 12: Annual Deferred Maintenance for Scenarios 1 to 4**

Figure 13 illustrates the changes in pavement condition under each scenario. Currently, approximately 14.3 percent of the network is in the “Good/Very Good” condition category with almost half in “Poor” condition and 7.8 percent in “Very Poor/Failed” condition. All four scenarios will increase the network percentage in “Good” condition in comparison to the current percent. Scenarios 1 – 4 will increase the network percentage in “Good” condition by 20.6, 27.9, 56.2, and 65.8 percent, respectively.

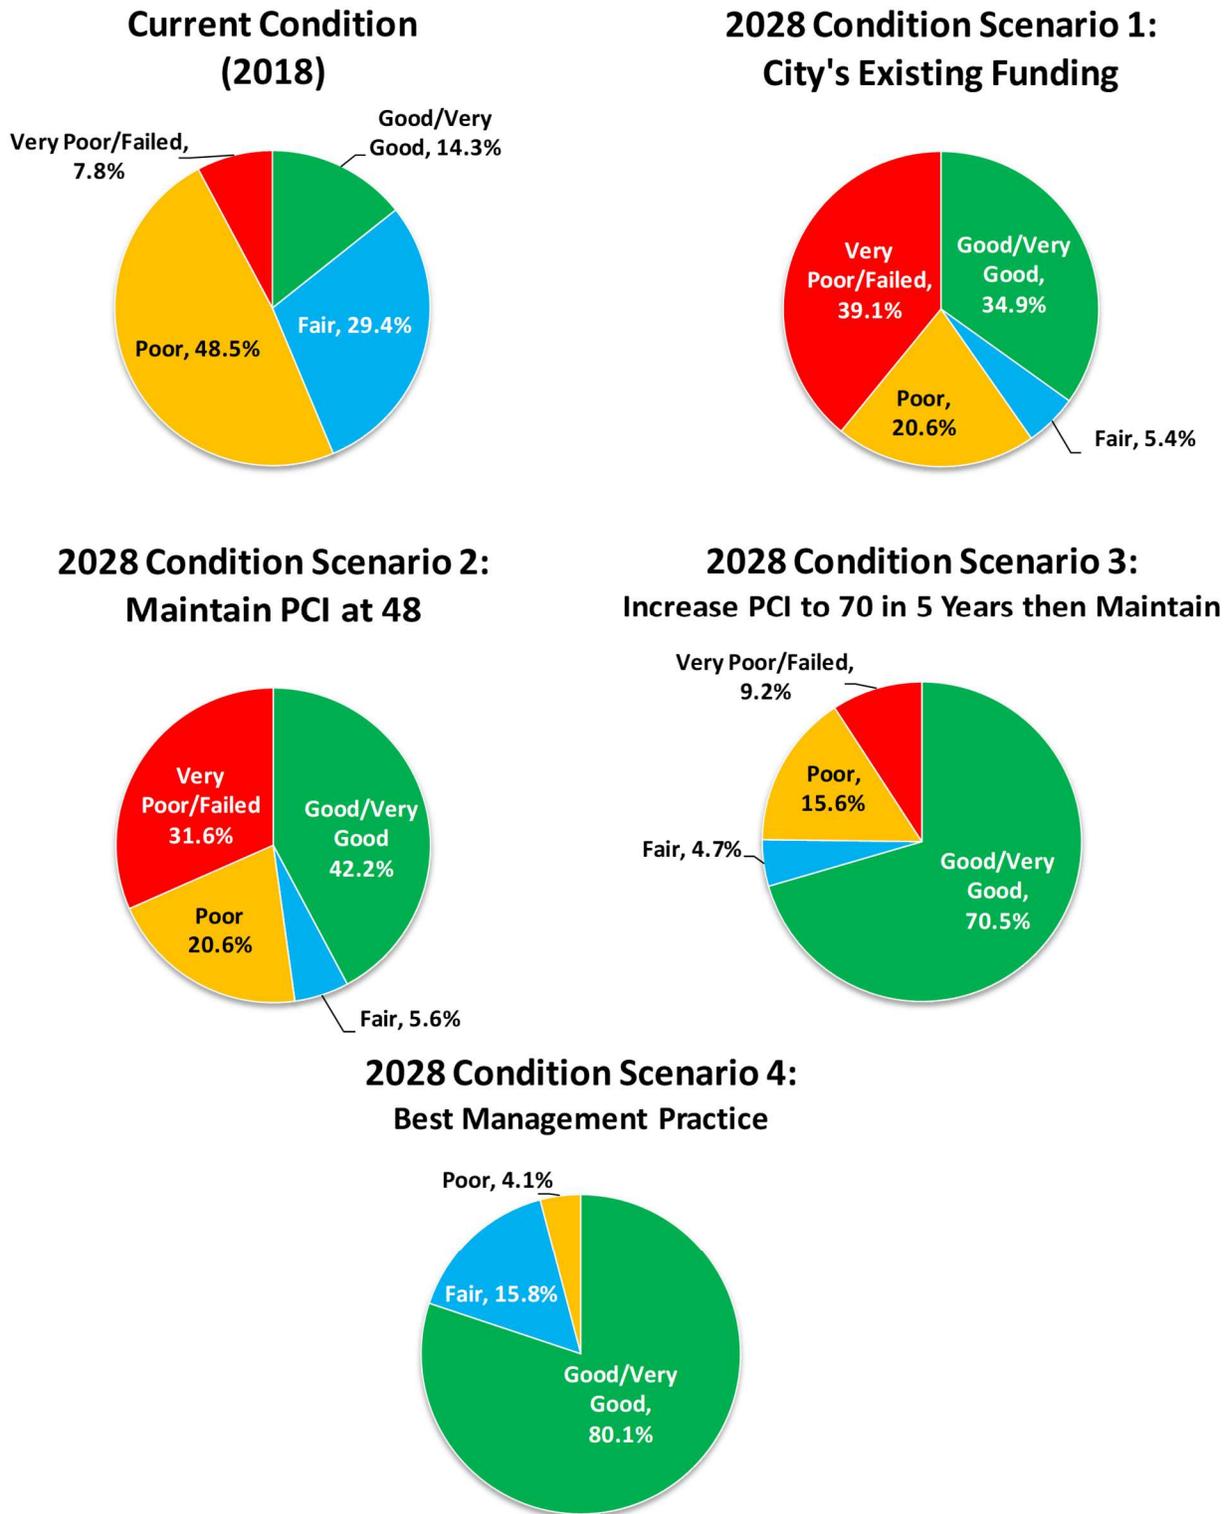

Figure 13: Pavement Condition Changes for Scenarios 1 to 4

## Discussion

To summarize, Monterey County has a substantial investment of \$1.1 billion in the pavement network. Overall, the County’s pavement network is in “Poor” condition with a 2018 average PCI of 48. Of the 1094.9 County-maintained paved centerline miles, approximately 14.3 percent are currently in “Good/Very Good” condition with 56.3 percent in “Poor” or “Very Poor/Failed” condition.

The analyses indicate that the County needs to spend approximately \$644 million (see Table 3 for needs analysis) in pavement maintenance and rehabilitation over the next ten years to repair all roads thus bringing the network to a good condition level that can be maintained with ongoing preventive maintenance. In the long run, this strategy will save the County money by preventing pavement deterioration to levels requiring rehabilitation or reconstruction. While this is the most desirable scenario, it is likely not realistic. Since the goal of pavement management is to provide users with a safe and functional pavement network without unduly increasing future M&R needs, Scenario 3 is recommended because it brings a significant majority (80.1 percent) of the pavement network to “Good/Very Good” condition and decreases the deferred maintenance to \$191.6 million.

To demonstrate the relative costs of different treatment strategies, Figure 14 illustrates the number of lane miles that may be paved in each scenario based on the average annual funding. The number shown assumes that the entire annual budget is spent on only one treatment type. What this illustrates is that a surface seal can be placed on approximately four times as many lane miles as those requiring overlays, and that the cost of performing CIR on one road is equivalent to sealing seven roads. Spending money on preventative maintenance treatments, such as surface seals, allows the County to treat, improve, and maintain more mileage than if the budget is used primarily for rehabilitation.

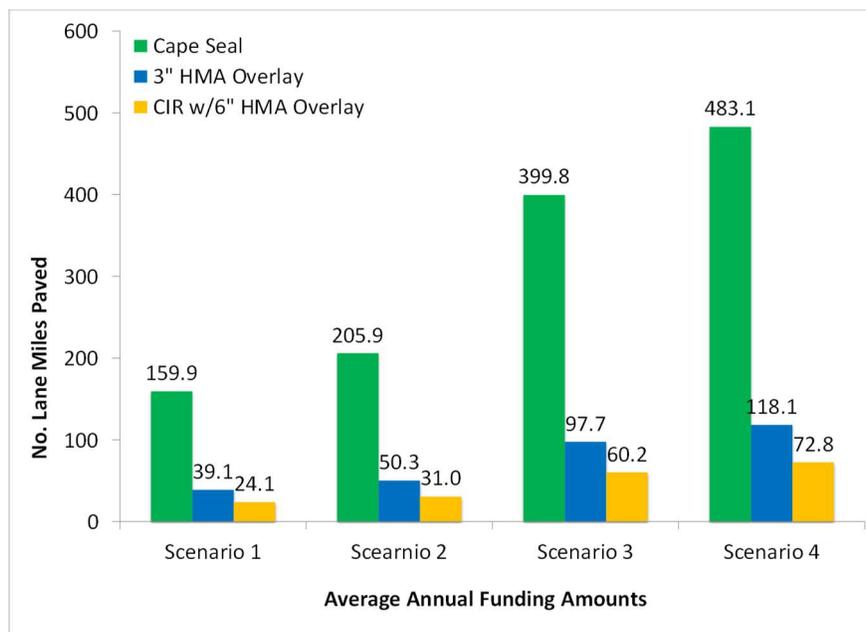

Figure 14: Paving Capabilities by Lane Miles

## Recommendations

### A. Pavement Budget

The recommended scenario for Monterey County is Scenario 3 (Improve PCI to 70), which requires a total budget of \$600 million over the next ten years. This will allow County to bring the majority (80.1 percent) of the pavement network to “Good/Very Good” condition and decrease the deferred maintenance to \$191.6 million.

### B. Pavement Maintenance Strategies

The County’s pavement maintenance strategies should include a balance of surface seals, overlays, and recycling. Since a portion of the pavement network is in “Good/Very Good” condition, it is important to preserve that condition as much as possible. Crack sealing is relatively inexpensive and can keep moisture out of the pavement structure, thus preventing the underlying aggregate base from premature failure. Life-extending surface seals such as chip, cape, and slurry seals are also cost-effective for pavements currently in fair to good condition. Value engineering treatments such as cold-in-place recycling, full-depth reclamation, and rubberized hot-mix asphalt are effective, cost-saving alternatives to traditional reconstruction.

NCE recommends that the County pursue a well-funded preventive maintenance program, with rehabilitation projects to improve pavements currently in poor condition. This is necessary to at least maintain the portion of the pavement network in “Good” condition and avoid increasing the deferred maintenance.

### C. Re-inspection Strategies

In order to continue monitoring the pavement network, and make appropriate decisions, NCE recommends that arterial and collector roads be inspected every two years and residential roads every four to five years.

### D. Maintenance and Rehabilitation Decision Tree

The maintenance and rehabilitation treatment strategies and associated unit costs should be reviewed and updated annually to reflect new construction techniques/costs. This will ensure budget analysis results are reliable and accurate.

A significant unknown variable is the future cost of rehabilitation. With the recent instability of oil prices, NCE recommends careful monitoring of construction costs and a readiness to adapt to price increases if necessary.

### E. Next Steps

To summarize, we recommend that the County undertake the following steps:

- Maintain a preventive maintenance strategy.
- Pursue additional pavement funding sources to ensure that Scenario 3 is feasible. Examples of some funding sources are included:

### **Federal Funding Sources**

- Regional Surface Transportation Program (RSTP)
- Surface Transportation Program (STP)
- Congestion Mitigation and Air Quality Improvement Program (CMAQ)
- Community Development Block Grant (CDBG)
- Highway Safety Improvement Program (HSIP)
- Federal Emergency Management Agency (FEMA)
- Transportation Enhancement Activities (TEA)

### **State Funding Sources**

- Active Transportation Program (ATP) which now includes the Bicycle Transportation Account (BTA) and Safe Routes to Schools (SR2S)
- State Transportation Improvement Program (STIP)
- AB 2766 (vehicle surcharge)
- Vehicle License Fees (VLF)
- CalRecycle grants
- State Water Resource Control Board
- Transportation Development Act (TDA)
- Traffic Safety Fund
- Transportation Uniform Mitigation Fee (TUMF)

### **Local/Regional Funding Sources**

- Development impact fees
- General funds
- Various assessment districts – lighting, maintenance, flood control, special assessments, community facility districts
- Traffic impact fees
- Utilities, e.g., stormwater, water, wastewater enterprise funds
- Parcel/property taxes
- Vehicle registration fees
- Vehicle code fines

## **APPENDIX A**

## **Section Description Inventory**

## Section Description Inventory Report

This report lists a variety of section description information for each of the County's pavement sections. It lists the street and section identifiers, limits, functional class, surface type, number of lanes, lengths, widths, areas, Inspected 2018 PCI, and PCI Date.

All of the County's pavement sections are included in the report. The report is sorted alphabetically by Road Name and Section ID. The field descriptions in this report are listed below:

<b>COLUMN</b>	<b>DESCRIPTION</b>
Road ID	Street Identification - A code up to ten characters/digits to identify the street. Generally, the street name is truncated to six characters. The Street ID should be unique for each street.
Section ID	Section Identification - A code up to ten characters/digits to identify the section number. The Section ID must be unique for each section of one street.
Road Name	Street Name - The name of the street as indicated by signs in the field.
Begin Location	Beginning limit of the section.
End Location	Ending limit of the section.
# of Lanes	Number of travel lanes.
Functional Class (FC)	Functional Classification (L = Local, MaC = Major Collector, MiA = Minor Arterial , MiC = Minor Collector, O = Other, OPA = Other Principal Arterial).
Length (ft)	Length of the section in feet.
Width (ft)	Average width of the section in feet.
Area (ft <sup>2</sup> )	Area of section in square feet.
Surface Type (ST)	Surface Type (A = AC Pavement, O = AC Overlay of AC Pavement, P= PCC Pavement, C = AC Overlay PCC Pavement, G = Gravel).
PCI Date	The last inspection date or rehabilitation date.
PCI	Average PCI for the section. This value is calculated for 2018 based on field surveys and maintenance data).

## **APPENDIX B**

## **Maintenance and Rehabilitation Decision Tree**

## Maintenance and Rehabilitation (M&R) Decision Tree

This report presents the current maintenance and rehabilitation decision tree that exists in the database. The decision tree forms the basis for all of the budgetary computations included in this volume. ***Changes to the decision tree will make the results in the budget reports invalid.*** All pavement treatment unit costs relevant to the street types in the database were updated.

The decision tree lists the treatments and costs selected for preventive maintenance and rehabilitation activities. Each line represents a specific combination of functional classification and surface type.

The preventive maintenance portion of the report is identified as Condition Category I – Very Good. All preventive maintenance treatment listings are assigned only to sections in Condition Category I where the  $PCI \geq 70$ . Sections with PCI values less than 70 are assigned to treatments listed in Categories II through V.

In the preventive maintenance category ( $PCI \geq 70$ ), a time sequence is used to identify the appropriate treatment and cost. Each preventive maintenance treatment description consists of three parts: 1) a CRACK treatment, 2) a SURFACE treatment, and 3) a RESTORATION treatment. These three parts allow the user to specify one of three different preventive maintenance treatments depending on the prior maintenance history of the section.

1. The CRACK treatment part can be used to specify the most frequent type of preventive maintenance activity planned (typically crack seals).
2. The SURFACE treatment part can be used to specify more extensive and less frequent preventive maintenance activities, such as chip seals or slurry seals. For example, a crack seal can be specified on a 3-year cycle with a slurry seal specified after 5 years.
3. The RESTORATION part can be used to specify a surface restoration treatment (such as an overlay) to be performed after a specified number of surface treatments. For example, after a certain number of successive slurry seals, an overlay can be specified instead of another slurry seal.

Rehabilitation treatments are assigned to sections in Condition Categories II through V ( $PCI$  less than 70). Each line is defined by a specific combination of functional classification, surface type, and condition category.

COLUMN	DESCRIPTION
Functional Class	Functional Classification identifying the branch number.
Surface	Surface Type identifying the branch number.
Condition Category	Condition Category (I through V).
Treatment Type	First Row (Crack Treatment) indicates localized treatment (e.g. crack sealing). Second Row (Surface Treatment) indicates surface treatment (e.g. slurry sealing). Third Row (Restoration Treatment) indicates surface restoration (e.g. overlay).
Treatment	Name of treatments from the "Treatment Descriptions" report.
Yrs. Between Crack Seals	First Row - number of years between successive treatment applications specified in the first row (i.e. CRACK treatment).

<b>COLUMN</b>	<b>DESCRIPTION</b>
Yrs. Between Surface Seals	Second Row - number of years between successive treatment applications specified in the second row (i.e. SURFACE treatment).
Number of Sequential Seals	Number of times that the treatment application in the second row (i.e. SURFACE treatment) will be performed prior to performing the treatment application in the third row.

Note that the treatments assigned to each section should not be blindly followed in preparing a road maintenance program. Engineering judgment and project level analysis should be applied to ensure that the treatment is appropriate and cost effective for the section.

## **APPENDIX C**

## **Budget Needs**

Projected PCI / Cost Summary  
Preventative Maintenance Treatment / Cost Summary  
Rehabilitation Treatment / Cost Summary

## Budget Needs Reports

The purpose of this section is to answer the question: *If the City had all the money in the world, what sections should be fixed and how much will it cost?* Based on the Maintenance & Rehabilitation (M&R) decision tree and the PCIs of the sections, the program will then select a maintenance or rehabilitation action and compute the total costs over a period of ten years. The Budget Needs represents the "ideal world" funding levels, while the Budget Scenario reports in the next section represent the most "cost effective" prioritization possible for the actual funding levels.

A budget needs analysis has been performed. The summary results from the analysis are shown below. An interest rate of 3% and an inflation factor of 3% were used to project the costs for the next ten years. This report shows the total ten-year budget that would be required to meet the County's standards as exemplified in the M&R decision tree.

Budget Needs reports included in this appendix are listed below:

- Projected PCI/Cost Summary
- Preventative Maintenance Treatment/Cost Summary
- Rehabilitation Treatment/Cost Summary

## Needs - Projected PCI/Cost Summary

This report summarizes and projects the County's network PCI over the ten-year analysis period, both with and without treatments applied. It also reports the associated costs, which are based on the treatment unit costs presented in the M&R decision tree.

<b>COLUMN</b>	<b>DESCRIPTION</b>
Year	Year in the analysis period.
PCI Treated	Projected network average PCI with all needed treatments applied.
PCI Untreated	Projected network average PCI without any treatments applied.
PM Cost	Total preventive maintenance treatment cost.
Rehab Cost	Total rehabilitation treatment cost.
Cost	The budget required for each year in the analysis period to meet the County's standard as shown on the M&R decision tree.
Total Cost	Total budget required over a ten-year period.

## Needs - Projected PCI/Cost Summary

Inflation Rate = 3.00 % Printed: 05/17/2019

Year	PCI Treated	PCI Untreated	PM Cost	Rehab Cost	Cost

## Needs - Preventive Maintenance Treatment/Cost Summary

This report summarizes each preventive maintenance treatment type, quantity of pavement affected, and total costs over the ten-year period. It also summarizes the total quantities and costs over the next ten years.

<b>COLUMN</b>	<b>DESCRIPTION</b>
Treatment	Type of preventive maintenance treatments needed.
Year	Year in the analysis period (i.e. 2019, 2020, 2021, etc.).
Area Treated	Quantities in linear feet (Seal Cracks) or square yard (Slurry Seal).
Cost	Maintenance treatment cost.

## Needs - Preventive Maintenance Treatment/Cost Summary
