Use Plan, Coastal Zone (APN: (009-162-008-000)]

The LIVE BY THE SEA LLC application (PLN250114) came on for public hearing before the County of Monterey Planning Commission on November 12, 2025. Having considered all the written and documentary evidence, the administrative record, the staff report, oral testimony, and other evidence presented, the Planning Commission finds and decides as follows:

FINDINGS

1. **FINDING:** **CONSISTENCY** – The Project, as conditioned, is consistent with the applicable plans and policies which designate this area as appropriate for development.
EVIDENCE: a) During the course of review of this application, the project has been reviewed for consistency with the text, policies, and regulations in:
 - the 1982 Monterey County General Plan;
 - Carmel Area Land Use Plan;
 - County of Monterey Coastal Implementation Plan (CIP) Part 4, Regulations for Development in the Carmel Area Land Use Plan Area; and
 - Monterey County Zoning Ordinance (Title 20);No conflicts were found to exist. No communications were received during the course of review of the project indicating any inconsistencies with the text, policies, and regulations in these documents.

- b) Allowed Use. The property is located at 3387 Ocean Avenue, Carmel-by-the-Sea, Carmel Land Use Plan, Coastal Zone (Assessor's Parcel Number 009-162-008-000), Carmel Area Land Use Plan. The parcel is zoned Medium Density Residential with a density of 2 acres per unit and a Design Control, or "MDR/2-D". MDR zoning allows for the establishment of the first single-family dwelling as a principally allowed use. The Design Control overlay requires the granting of a Design Approval for all structures. The proposed project involves the construction of a 2,812 square foot single-family dwelling, inclusive of a 592 square foot garage two-car garage and 307 square foot covered patio, and associated site improvements. The project also involves the removal of 4 Monterey Pine trees and 20 Oak trees, which is an allowed use subject to the granting of a Coastal Development Permit. Therefore, the project is an allowed land use for this site.
- c) Lot Legality. The subject property is shown in its current configuration (12,132 square feet) as Lot 9 in Block 27 of Tract No.2 on a Final Map entitled "Map of Hatton Fields No. 2", recorded in April of 1926 (Volume 3, Cities & Towns, Page 32). Therefore, the County recognizes the subject properties as legal lots of record.
- d) Review of Development Standards. The project meets all required development standards for Medium Density Residential zoning district, which is identified in Title 20 section 20.12.060 respectively. The required setbacks in the MDR zoning overlay are 20 feet (front), 5 feet (side), and 10 feet (rear). The proposed single-family dwelling will have setbacks of 30 feet (front), 8 feet 6 inches (north side), 9 feet 10 inches (side), and 30 feet 6 inches (rear). The MDR zoning district allows a maximum height of 30 feet for main structures, and the proposed single-family dwelling will have a height of 20 feet 3 inches. The MDR zoning district allows a maximum building site coverage of 35%, which in this case is 4,246 square feet. The proposed project will have a building site coverage of 3,819 square feet or 31%. Therefore, the project meets all required development standards.
- e) Design and Visual Resources. Pursuant to Title 20 Chapter 20.44, the project parcels and surrounding area are designated as a Design Control Zoning District ("D" zoning overlay), which regulates the location, size, configuration, materials, and colors of structures and fences to assure the protection of the public viewshed and neighborhood character. The single-family dwelling will have a contemporary modern architectural style with rural Tuscan finishes, and exterior colors and materials consisting of smooth alabaster white painted stucco, copper stone exterior, and Tricon black aluminum reveal trim and roofing. The residences within the vicinity vary in architectural style, ranging from modern-style homes to contemporary rural-style homes. The proposed exterior finishes do not detract from the surrounding environment and are consistent with the surrounding residential neighborhood character. CARLUP Policy 1.4 and Key Policy 2.2.2 state that the common goal of the Carmel area must be that future development should harmonize and blend with the natural scenic character, as demonstrated by the proposed project's design. The property is surrounded by mature Coast live oaks

and Monterey pines, and other native vegetation, along with nearby residences. Although 24 trees will be removed, all other trees and vegetation will remain, resulting in the proposed development blending in with the surrounding residential neighborhood. To ensure consistency with Carmel Area LUP Policy 2.2.4.10.D and CIP section 20.146.030.C.1.d, exterior lighting plan Condition No. 4 has been applied. This will require that the exterior lighting on the property be unobtrusive, down-lit, harmonious with the local area, and constructed or located so that only the intended area is illuminated and off-site glare is fully controlled. Due to intervening vegetation and existing development, the proposed residence and accessory structures will not create any adverse visual impacts. Map A of the Carmel Land Use Plan entitled “Local Coastal Program General Viewshed”, indicates the subject property as not being in an area designated as sensitive or highly sensitive. The subject property is not along a scenic highway corridor or in the critical viewshed. Therefore, as proposed and conditioned, the project is not in conflict with the surrounding environment or with the surrounding residential neighborhood character and assures protection of the public viewshed and visual integrity.

- f) Tree Removal. The proposed project involves the removal of 24 protected trees. However, as detailed in Finding No. 6 and supporting evidence, the proposed tree removal is the minimum required under the circumstances, and the removal will not involve a risk of adverse environmental impacts. Therefore, the criteria necessary to grant a Coastal Development Permit have been met in this case.
- g) Cultural Resources. According to the Monterey County Geographic Information System (GIS), the subject property is within an area of moderate archaeological sensitivity. Therefore, an archaeological report is not required under the Carmel Area CIP section 20.146.090.B.1. The potential for inadvertent impacts to cultural resources is limited and will be controlled by use of the County’s standard condition (Condition No. 3), which requires the contractor to stop work if previously unidentified resources are discovered during construction.
- h) Land Use Advisory Committee. Based on the LUAC Procedure guidelines adopted by the Monterey County Board of Supervisors, this application warranted referral to the LUAC because the project involves a Design Approval subject to review by the Planning Commission. Due to an ongoing lack of quorum issue with the Carmel Highlands LUAC, the project could not be reviewed by the committee prior to the Planning Commission’s consideration of the project.
- i) The application, project plans, and related support materials submitted by the project applicant to County of Monterey HCD-Planning for the proposed development found in Project File PLN250114.

2. **FINDING:** **SITE SUITABILITY** – The site is physically suitable for the proposed development and/or use.

EVIDENCE: a) The project has been reviewed for site suitability by the following departments and agencies: HCD- Planning, Cypress Fire Protection District (fire), HCD-Engineering Services, HCD-Environmental

Services, and Environmental Health Bureau. County staff reviewed the application materials and plans to verify that the project on the subject site conforms to the applicable plans and regulations, and there has been no indication from these departments/agencies that the site is not suitable for the development. Conditions recommended have been incorporated.

- b) Staff identified potential impacts to Geological Resources (soils), Forest Resources, Biological Resources, and Archaeological Resources. The following reports have been prepared:
 - “Geotechnical Investigation Design Phase” (County of Monterey Library No. LIB250245), prepared by Butano Geotechnical Engineering, Inc., Watsonville, CA, April 2025
 - “Tree Resource Assessment” (County of Monterey Library No. LIB250240), prepared by Frank Ono, Pacific Grove, CA, July 21st, 2025

The above-mentioned technical reports by outside consultants indicated that there are no physical or environmental constraints that would indicate that the site is not suitable for the use proposed. County staff has independently reviewed these reports and concurs with their conclusions.

- c) Staff conducted a site inspection on October 7th, 2025, to verify that the site is suitable for this use.
- d) The application, project plans, and related support materials submitted by the project applicant to the County of Monterey HCD - Planning for the proposed development found in Project File PLN250114.

3. **FINDING:** **HEALTH AND SAFETY** - The establishment, maintenance, or operation of the use or structure applied for, will not, under the circumstances of the particular case, be detrimental to the health, safety, peace, morals, comfort, and general welfare of persons residing or working in the neighborhood of such proposed use; or be detrimental or injurious to property and improvements in the neighborhood; or to the general welfare of the County.

- EVIDENCE:**
- a) The project was reviewed by HCD- Planning, Cypress Fire Protection District (fire), HCD-Engineering Services, HCD-Environmental Services, and Environmental Health Bureau. The respective agencies have recommended conditions, where appropriate, to ensure that the project will not have an adverse effect on the health, safety, and welfare of persons either residing or working in the neighborhood.
 - b) All necessary public facilities will be provided to the proposed single-family dwelling. Potable water will be provided to the parcel by Cal American Water through the Monterey Peninsula Water Management District (MPWMD), and wastewater will be handled by the Carmel Area Wastewater District.
 - c) Staff conducted a site inspection on October 7th, 2025, to verify that the site is suitable for this use.
 - d) The application, project plans, and related support materials submitted by the project applicant to the County of Monterey HCD - Planning for the proposed development found in Project File PLN250114.

4. **FINDING:** **NO VIOLATIONS** - The subject property is in compliance with all rules and regulations pertaining to zoning uses, subdivision, and any other applicable provisions of the County's zoning ordinance. No violations exist on the property.
- EVIDENCE:** a) Staff reviewed County of Monterey HCD - Planning and Building Services Department records and is not aware of any violations existing on subject property.
- b) Staff conducted a site inspection on October 7th, 2025, and researched County records to assess if any violation exists on the subject property.
- c) The application, plans and supporting materials submitted by the project applicant to County of Monterey HCD-Planning for the proposed development are found in Project File PLN250114.
-
5. **FINDING:** **CEQA (Exempt)** - The project is categorically exempt from environmental review and no unusual circumstances were identified to exist for the proposed project.
- EVIDENCE:** a) California Environmental Quality Act (CEQA) Guidelines Section 15303 categorically exempts the construction and location of limited numbers of new, small facilities or structures including one single-family residence in a residential zone.
- b) The proposed project involves construction of a 2,812 square foot single-family dwelling, inclusive of a 592 square foot garage two-car garage and 307 square foot covered patio, and associated site improvements, as well as the removal of 24 protected trees. Therefore, the project is consistent with the categorical exemption requirements of CEQA Guidelines section 15303.
- c) No adverse environmental effects were identified during staff review of the development application during a site visit on October 7th, 2025.
- d) None of the exceptions under CEQA Guidelines Section 15300.2 apply to this project. The project does not involve a designated historical resource, a hazardous waste site, unusual circumstances that would result in a significant effect, or development that would result in a cumulative significant impact. The project site does not have an environmentally sensitive habitat, the property is not located on or along a scenic highway or corridor and has been designed and sited to minimize impacts to forest resources and remove only the trees necessary for construction. There is no substantial evidence that would support a fair argument that the project has a reasonable possibility of having a significant effect on the environment or that it would result in a cumulative significant impact.
- e) The application, project plans, and related support materials submitted by the project applicant to County of Monterey HCD-Planning for the proposed development found in Project File PLN250114.
-
6. **FINDING:** **TREE REMOVAL** - The siting, location, size, and design has been established to minimize tree removal and has been limited to that required for the overall health and long-term maintenance of the property.

- EVIDENCE:**
- a) The project includes an application for the removal of 24 protected trees. The tree removal is consistent with Carmel Area Land Use Plan (LUP) policies protecting Forest Resources, and their implementing regulations in the County of Monterey Coastal Implementation Plan, Part 4, Regulations for Development in the Carmel Area Land Use Plan (CIP). In accordance with the applicable policies, a Coastal Development Permit is required, and the criteria to grant said permit have been met.
 - b) Pursuant to Title 20 section 20.64.260.D.3.a, an Arborist report (County of Monterey Library No. LIB250240) was prepared to evaluate the health, structure, and preservation suitability for each tree within or adjacent to the proposed development. The Arborist report inventoried a total of 33 trees within the subject property and determined that most of these are in fair condition, while two are in poor condition. As proposed, 24 trees will be removed with the implementation of this project, including 20 Coast live oaks and four landmark Monterey pines. Nineteen of these trees are within the development footprint, and the other five trees are either within grading boundaries or are in declining health, with proposed impacts to their critical root zones. No landmark Oaks are proposed for removal.
 - c) The proposed tree removal is the minimum required under the circumstances of this case. The lot is heavily forested and thus, avoiding tree removal entirely is unfeasible for any reasonable development consistent with the neighborhood. The single-family dwelling is consistent (slightly smaller) in size with other single-family dwellings within the surrounding neighborhood, which range from approximately 4,000 to 6,000 square feet (see Finding No. 1, Evidence “e”). Nineteen of the trees to be removed are within the development footprint. The remaining trees to be removed are either within grading limits, or are within close proximity to the development, where greater than 50% of their critical root zones will be impacted and are therefore recommended for removal. In addition to being impacted by grading activities, the removal of these trees within close proximity to the development also helps to reduce fuel loads near the proposed residential development. Removal of these trees is consistent with the recommendations of the prepared forest management plan and the State’s fuel management requirements and guidelines.
 - d) CIP section 20.146.060.D.1 prohibits the removal of landmark trees, unless the decision-making body finds that the trees are not visually or historically significant and there no alternatives whereby the tree removal can be avoided. All four of the Monterey pine proposed for removal are greater than 24 inches in diameter, thus classifying them as landmark trees. Two of the landmark Monterey Pine trees that were cataloged as #963 and #977 were identified as being in poor condition, with visible evidence of heart rot. The other two landmark Monterey pine trees, tagged as #976 and #981, are proposed for removal due to the impacts of grading associated with a retaining wall and garage that will cause the trees to suffer root loss and be unstable. The findings can also be met to allow the removal of the landmark trees, as none of them are

known to be visually or historically significant, exemplary of their species, or more than 1000 years old. See subsequent Evidence “e” demonstrating no alternatives.

- e) CIP section 20.146.060.D.3 states that removal of native trees is limited to those necessary for the proposed development, and that development shall be required to be adjusted for siting, location, size, and design as necessary to minimize tree removal. In this case, the removal is the minimum under the circumstances, and alternatives such as re-siting, re-design, and reduction in development would not be successful in saving these trees or a greater number than proposed. There is no alternative that would retain the trees proposed for removal, including the landmark trees, with development of the subject lot with a reasonable sized single-family development. As delineated on the project plans, the trees sited for removal are within the proposed footprint of development or are within poor health on the proposed residence. The project will retain the property’s remaining trees, which are contiguous with the surrounding forested area of Carmel-by-the -Sea and the unincorporated area of Monterey County. Trees to be retained will be protected with implementation of Condition No. 5.
- f) Title 20 requires a 1:1 replanting of removed protected trees, unless this requirement would be detrimental to the long-term health of the remaining habitat or the replanted trees. The Project Arborist concluded that the subject property is already overcrowded and does not have adequate space for the replanting of 24 trees after the construction of the single-family dwelling, while also managing onsite fuel loads. Therefore, the arborist recommends the replanting of five 5-gallon Monterey pines or Coast live oaks. Replanting only five trees also ensures the property’s fuel loads can be adequately managed. If replanted on a 1:1 ratio, the replanted 5-gallon trees would be unlikely to survive due to the overcrowded condition and being outcompeted by surrounding mature trees. Accordingly, Condition No. 6 requires the applicant to replant five 5-gallon Monterey pine or Coast live oak trees.
- g) Measures for tree protection during construction have been incorporated as a condition of approval, and include tree protection zones, trunk protection, hand excavation, and bridging roots.
- h) No significant long-term effects on the forest ecosystem are anticipated. The project, as proposed, will not significantly reduce the availability of wildlife habitat over the long term. Condition No. 7 requires a raptor/bird nesting survey to be performed by a qualified biologist if tree removal is to be conducted between February 22 and August 1.
- i) Staff conducted a site inspection on October 7th, 2025, to verify that the tree removal is the minimum necessary for the project and to identify any potential adverse environmental impacts related to the proposed tree removal.
- j) The application, plans and supporting materials submitted by the project applicant to County of Monterey HCD-Planning for the proposed development are found in Project File PLN250114.

7. **FINDING:** **APPEALABILITY** - The decision on this project may be appealed to the Board of Supervisors and the California Coastal Commission.
- EVIDENCE:** a) Board of Supervisors. Section 20.80.040.D of the Monterey County Zoning Ordinance (Title 20) allows an appeal to be made to the Board of Supervisors by any public agency or person aggrieved by a decision of the Planning Commission.
- b) California Coastal Commission. Pursuant to Title 20 section 20.86.080.A, the project is subject to appeal by/to the California Coastal Commission because it involves development between the sea and the first through public road paralleling the sea (i.e. Highway 1), and a conditionally allowed use (native tree removal).

DECISION

NOW, THEREFORE, based on the above findings and evidence, the Planning Commission does hereby:

1. Find that the project qualifies as a Class 3 Categorical Exemption pursuant to CEQA Guidelines section 15303, and there are no exceptions pursuant to section 15300.2; and
2. Approve a Combined development Permit consisting of: 1) a Coastal Administrative Permit and Design Approval to allow construction of a 2,812 square foot single-family dwelling, inclusive of a 592 square foot two-car garage and 307 square foot covered patio, and associated site improvements; and 2) a Coastal Development Permit to allow removal of 24 protected trees.

All of which are in general conformance with the attached sketch and subject to the attached 12 conditions, all being attached hereto and incorporated herein by reference.

Condition/Mitigation Monitoring Measure: Any tree removal activity that occurs during the typical bird nesting season (February 22-August 1), the County of Monterey shall require that the project applicant retain a County qualified biologist to perform a nest survey in order to determine if any active raptor or migratory bird nests occur within the project site or within 300 feet of proposed tree removal activity. During the typical nesting season, the survey shall be conducted no more than 30 days prior to ground disturbance or tree removal. If nesting birds are found on the project site, an appropriate buffer plan shall be established by the project biologist. (HCD - Planning)

Compliance or Monitoring Action to be Performed: No more than 30 days prior to ground disturbance or tree removal, the Owner/Applicant/Tree Removal Contractor shall submit to HCD -Planning a nest survey prepared by a County qualified biologist to determine if any active raptor or migratory bird nests occur within the project site or immediate vicinity.

Condition/Mitigation Monitoring Measure: The applicant shall submit a site-specific Construction Management Plan (CMP) to HCD-Planning and HCD-Engineering Services for review and approval that describes how the site will be managed during construction to protect onsite and nearby sensitive resources, avoid construction nuisance impacts to nearby properties, and reduce congesting/circulation impacts to the local transportation network. The applicant shall be required to adhere to the approved CMP. The Construction Management Plan shall include the following (As applicable):

- Names and contact information (primary and secondary) of parties responsible for project during construction.
- Summary table including:
 - Types of construction vehicles and number of truck and/or vehicle trips/day.
 - Quantity and extent (acreage) of grading per day (Air Quality Management District Standards).
 - Hours of operation.
 - Project scheduling (dates) and duration of construction.
- Map illustrating:
 - Location of project (vicinity map).
 - Proposed route for hauling material.
 - Location of Sensitive Receptors (schools, hospitals, etc) along haul route.
 - Location of stockpiles and parking for construction vehicles.
 - Sensitive areas (tree protection zones, drainage, environmentally sensitive habitat, slopes, etc) where no parking, stockpiling, construction will occur.
- The CMP shall:
 - Prescribe measures to reduce traffic impacts including but not limited to scheduling hauling and material deliveries off-peak hours and encouraging carpooling
 - Prohibit blocking of access roads or driveways.
 - Avoid impacting access to private properties by not parking on neighboring properties or impinging on the travel lane of access roads. Construction vehicles shall be encouraged to not park directly in-front of neighboring properties.
 - Ensure pedestrian paths of travel are not impeded or that alternative paths of travel are provided.
 - Provide adequate storage and staging areas. Staging and storage areas shall be on-site to maximum extent possible to reduce potential noise, dust, glare, and other impacts to neighboring property.
 - If on-site storage and staging areas cannot be accommodated, appropriate best management practices shall be implemented to ensure that off-site storage and staging do not adversely impact access or cause excessive noise, dust, or lighting for neighboring properties.
 - The Applicant/Owner may need to obtain separate authorization to utilize off-site storage and staging areas. The owner/applicant shall be responsible for securing this authorization prior to approval of the CMP.
 - Prior to the commencement of construction activities, the applicant shall post a publicly visible sign that outlines the specifics of the construction management plan, the telephone number of the on-site contractor, and the telephone number of the person to contact regarding complaints. This contact person shall respond to complaints and take corrective action within 24 hours.
 - Recommendations from the project biologist, arborist, archaeologist, and/or other qualified professionals relating to construction activities shall be included in the CMP.

- Compliance or Monitoring Action to be Performed:**
1. Prior to issuance of a construction permit, the Owner/Applicant/Contractor shall prepare and submit a CMP meeting the requirements of this condition to HCD-Planning and HCD-Engineering Services for review and approval.
 2. On-going through construction phases Owner/Applicant/Contractor shall implement the approved measures during the construction/grading phase of the project.

MAXIMUM INCREMENTAL REACTIVITY (MIR). The maximum change in weight of ozone formed by adding a compound to the "Base Reactive Organic Gas (ROG) Mixture" per weight of compound added, expressed to hundredths of a gram (g O₃/g ROG).

Note: MIR values for individual compounds and hydrocarbon solvents are specified in CCR, Title 17, Sections 94700 and 94701.

MOISTURE CONTENT. The weight of the water in wood expressed in percentage of the weight of the oven-dry wood.

PRODUCT-WEIGHTED MIR (PWMIR). The sum of all weighted-MIR for all ingredients in a product subject to this article. The PWMIR is the total product reactivity expressed to hundredths of a gram of ozone formed per gram of product (excluding container and packaging).

Note: PWMIR is calculated according to equations found in CCR, Title 17, Section 94521 (a).

REACTIVE ORGANIC COMPOUND (ROC). Any compound that has the potential, once emitted, to contribute to ozone formation in the troposphere.

VOC. A volatile organic compound (VOC) broadly defined as a chemical compound based on carbon chains or rings with vapor pressures greater than 0.1 millimeters of mercury at room temperature. These compounds typically contain hydrogen and may contain oxygen, nitrogen and other elements. See CCR Title 17, Section 94508(a).

Surveyor's Notes:

This map portrays the site at the time of the survey and does not show soils or geology information, underground conditions, easements, zoning or regulatory information or any other items not specifically requested by the property owner. There may be easements or other rights, recorded or unrecorded, affecting the subject property which are not shown hereon.

Underground utilities, if any, were not located. Information regarding underground utility locations should be obtained from the appropriate utility companies or public agencies.

Elevations are based on an arbitrarily assumed datum as noted. Ground may be more irregular than contours indicate.

Distances are expressed in feet and decimals thereof.

The cross symbol (x) marks the horizontal position of the spot elevation shown. Tree symbols are drawn to scale only approximately.

Sufficient boundary ties were made to graphically show existing features however a complete boundary survey was not performed. The boundary shown hereon should be considered preliminary. A diligent search was performed for the two front corners of the lot which yielded the found original corner at the southwesterly corner. We advise additional field work to search the rear corners and the front corners of the adjacent two lots to the west.

Typical tree notation. Indicates an elevation of 301.26' at the trunk of a cypress tree with a 36" trunk diameter (inner circle). Multi-trunk trees denoted with an overall trunk diameter with clarifying notes following / symbol.

Construction Best Management Practices (BMPs)

Construction projects are required to implement the stormwater best management practices (BMP) on this page, as they apply to your project, all year long.

Materials & Waste Management

Non-Hazardous Materials

- ❑ Berm and cover stockpiles of sand, dirt or other construction material with tarps when rain is forecast or if not actively being used within 14 days.
- ❑ Use (but don't overuse) reclaimed water for dust control.

Hazardous Materials

- ❑ Label all hazardous materials and hazardous wastes (such as pesticides, paints, thinners, solvents, fuel, oil, and antifreeze) in accordance with city, county, state and federal regulations.
- ❑ Store hazardous materials and wastes in water tight containers, store in appropriate secondary containment, and cover them at the end of every work day or during wet weather or when rain is forecast.
- ❑ Follow manufacturer's application instructions for hazardous materials and be careful not to use more than necessary. Do not apply chemicals outdoors when rain is forecast within 24 hours.
- ❑ Arrange for appropriate disposal of all hazardous wastes.

Waste Management

- ❑ Cover waste disposal containers securely with tarps at the end of every work day and during wet weather.
- ❑ Check waste disposal containers frequently for leaks and to make sure they are not overfilled. Never hose down a dumpster on the construction site.
- ❑ Clean or replace portable toilets, and inspect them frequently for leaks and spills.
- ❑ Dispose of all wastes and debris properly. Recycle materials and wastes that can be recycled (such as asphalt, concrete, aggregate base materials, wood, gyp board, pipe, etc.)
- ❑ Dispose of liquid residues from paints, thinners, solvents, glues, and cleaning fluids as hazardous waste.

Construction Entrances and Perimeter

- ❑ Establish and maintain effective perimeter controls and stabilize all construction entrances and exits to sufficiently control erosion and sediment discharges from site and tracking off site.
- ❑ Sweep or vacuum any street tracking immediately and secure sediment source to prevent further tracking. Never hose down streets to clean up tracking.

Equipment Management & Spill Control

Maintenance and Parking

- ❑ Designate an area, fitted with appropriate BMPs, for vehicle and equipment parking and storage.
- ❑ Perform major maintenance, repair jobs, and vehicle and equipment washing off site.
- ❑ If refueling or vehicle maintenance must be done onsite, work in a bermed area away from storm drains and over a drip pan big enough to collect fluids. Recycle or dispose of fluids as hazardous waste.
- ❑ If vehicle or equipment cleaning must be done onsite, clean with water only in a bermed area that will not allow rinse water to run into gutters, streets, storm drains, or surface waters.
- ❑ Do not clean vehicle or equipment onsite using soaps, solvents, degreasers, steam cleaning equipment, etc.

Spill Prevention and Control

- ❑ Keep spill cleanup materials (rags, absorbents, etc.) available at the construction site at all times.
- ❑ Inspect vehicles and equipment frequently for and repair leaks promptly. Use drip pans to catch leaks until repairs are made.
- ❑ Clean up spills or leaks immediately and dispose of cleanup materials properly.
- ❑ Do not hose down surfaces where fluids have spilled. Use dry cleanup methods (absorbent materials, cat litter, and/or rags).
- ❑ Sweep up spilled dry materials immediately. Do not try to wash them away with water, or bury them.
- ❑ Clean up spills on dirt areas by digging up and properly disposing of contaminated soil.
- ❑ Report significant spills immediately. You are required by law to report all significant releases of hazardous materials, including oil. To report a spill: 1) Dial 911 or your local emergency response number, 2) Call the Governor's Office of Emergency Services Warning Center, (800) 852-7550 (24 hours).

Earthwork & Contaminated Soils

Erosion Control

- ❑ Schedule grading and excavation work for dry weather only.
- ❑ Stabilize all denuded areas, install and maintain temporary erosion controls (such as erosion control fabric or bonded fiber matrix) until vegetation is established.
- ❑ Seed or plant vegetation for erosion control on slopes or where construction is not immediately planned.

Sediment Control

- ❑ Protect storm drain inlets, gutters, ditches, and drainage courses with appropriate BMPs, such as gravel bags, fiber rolls, berms, etc.
- ❑ Prevent sediment from migrating offsite by installing and maintaining sediment controls, such as fiber rolls, silt fences, or sediment basins.
- ❑ Keep excavated soil on the site where it will not collect into the street.
- ❑ Transfer excavated materials to dump trucks on the site, not in the street.
- ❑ Contaminated Soils
- ❑ If any of the following conditions are observed, test for contamination and contact the Regional Water Quality Control Board:
 - Unusual soil conditions, discoloration, or odor.
 - Abandoned underground tanks.
 - Abandoned wells
 - Buried barrels, debris, or trash.

Paving/Asphalt Work

- ❑ Avoid paving and seal coating in wet weather, or when rain is forecast before fresh pavement will have time to cure.
- ❑ Cover storm drain inlets and manholes when applying seal coat, tack coat, slurry seal, fog seal, etc.
- ❑ Collect and recycle or appropriately dispose of excess abrasive gravel or sand. Do NOT sweep or wash it into gutters.
- ❑ Do not use water to wash down fresh asphalt concrete pavement.

Sawcutting & Asphalt/Concrete Removal

- ❑ Completely cover or barricade storm drain inlets when saw cutting. Use filter fabric, catch basin inlet filters, or gravel bags to keep slurry out of the storm drain system.
- ❑ Shovel, absorb, or vacuum saw-cut slurry and dispose of all waste as soon as you are finished in one location or at the end of each work day (whichever is sooner!).
- ❑ If sawcut slurry enters a catch basin, clean it up immediately.

Concrete, Grout & Mortar Application

- ❑ Store concrete, grout and mortar under cover, on pallets and away from drainage areas. These materials must never reach a storm drain.
- ❑ Wash out concrete equipment/trucks offsite or in a contained area, so there is no discharge into the underlying soil or onto surrounding areas. Let concrete harden and dispose of as garbage.
- ❑ Collect the wash water from washing exposed aggregate concrete and remove it for appropriate disposal offsite.

Dewatering

- ❑ Effectively manage all run-on, all runoff within the site, and all runoff that discharges from the site. Divert run-on water from offsite away from all disturbed areas or otherwise ensure compliance.
- ❑ When dewatering, notify and obtain approval from the local municipality before discharging water to a street gutter or storm drain. Filtration or diversion through a basin, tank, or sediment trap may be required.
- ❑ In areas of known contamination, testing is required prior to reuse or discharge of groundwater. Consult with the Engineer to determine whether testing is required and how to interpret results. Contaminated groundwater must be treated or hauled off-site for proper disposal.

Painting & Paint Removal

Painting cleanup

- ❑ Never clean brushes or rinse paint containers into a street, gutter, storm drain, or surface waters.
- ❑ For water-based paints, paint out brushes to the extent possible. Rinse to the sanitary sewer once you have gained permission from the local wastewater treatment authority. Never pour paint down a drain.
- ❑ For oil-based paints, paint out brushes to the extent possible and clean with thinner or solvent in a proper container. Filter and reuse thinners and solvents. Dispose of residue and unusable thinner/solvents as hazardous waste.

Paint removal

- ❑ Chemical paint stripping residue and chips and dust from marine paints or paints containing lead or tributyltin must be disposed of as hazardous waste.
- ❑ Paint chips and dust from non-hazardous dry stripping and sand blasting may be swept up or collected in plastic drop cloths and disposed of as trash.

Landscape Materials

- ❑ Contain stockpiled landscaping materials by storing them under tarps when they are not actively being used.
- ❑ Stack erodible landscape material on pallets. Cover or store these materials when they are not actively being used or applied.
- ❑ Discontinue application of any erodible landscape material within 2 days before a forecast rain event or during wet weather.

Storm drain polluters may be liable for fines of up to \$10,000 per day!
