

HYDROELECTRIC REVENUE

Imbalance explanation:

The imbalance energy reconciliation is a mechanism contemplated in the contract (based on Exhibit 2 of the Power Purchase Agreement between NCPA and MCWRA) that determines which party pays for imbalances between the meter and the CAISO market schedules:

If the meter is greater than the schedule, then MCWRA pays the difference at the CAISO market RTD LMP (at the resource's PNode);

If the meter is less than the CAISO market schedule, then NCPA pays the difference at the CAISO market DA LMP (at the resource's PNode).

Agency needs to be precise on its power scheduling to minimize imbalances

Exhibit 2

CONTRACT PRICE

Pursuant to Section 3.1(a) and 3.1(c) Buyer shall pay Seller for the Output based on the Contract Price set forth below for the applicable delivery period, subject to adjustment based on the imbalance energy settlement adjustment equations set forth below to account for the differences between Scheduled forecasted Output and metered Output during each applicable ISO settlement interval.

CONTRACT YEAR	PRICE (\$/MWh)
2014	\$ 75.00
2015	\$ 76.13
2016	\$ 77.27
2017	\$ 78.43
2018	\$ 79.60
2019	\$ 80.80
2020	\$ 82.01
2021	\$ 83.24
2022	\$ 84.49
2023	\$ 85.75
2024	\$ 87.04
2025	\$ 88.35
2026	\$ 89.67
2027	\$ 91.02
2028	\$ 92.38
2029	\$ 93.77
2030	\$ 95.17
2031	\$ 96.60
2032	\$ 98.05
2033	\$ 99.52

1. Imbalance Energy Settlement Adjustment

a) If Generating Facility Output MWh_{metered} is greater than Scheduled $MWh_{\text{physical trade}}$ then Seller shall pay to Buyer the following imbalance energy settlement adjustment for each applicable ISO settlement interval:

a. $\max(\$0, RTLMP_{\text{node}}) * \max(0, MWh_{\text{metered}} - MWh_{\text{physical trade}})$

i. Where:

1. $RTLMP_{node}$ is the real-time locational marginal price at the Delivery Point for the applicable ISO settlement interval;
2. $MWh_{metered}$ is the actual metered Output from the Generating Facility for the applicable ISO settlement interval; and
3. $MWh_{physical\ trade}$ is the Scheduled forecasted Output of the Generating Facility for the applicable ISO settlement interval provided from Seller's Scheduling Coordinator to Buyer's Scheduling Coordinator through the use of an Inter-SC Trade submitted in the day-ahead market time frame.

b) If Generating Facility Output $MWh_{metered}$ is less than Scheduled $MWh_{physical\ trade}$ then Buyer shall pay to Seller the following imbalance energy settlement adjustment for each applicable ISO settlement interval:

a. $DALMP_{node/APN} * \max(0, MWh_{physical\ trade} - MWh_{metered})$

i. Where:

1. $DALMP_{node/APN}$ is the day-ahead locational marginal price calculated by the ISO at the Delivery Point, the aggregated pricing node (e.g., NP15 EZ Gen Hub), or a combination of such price, based on the quantity and location of the $MWh_{physical\ trade}$ for the applicable ISO settlement interval;
2. $MWh_{metered}$ is the actual metered Output from the Generating Facility for the applicable ISO settlement interval; and
3. $MWh_{physical\ trade}$ is the Scheduled forecasted Output of the Generating Facility for the applicable ISO settlement interval provided from Seller's Scheduling Coordinator to Buyer's Scheduling Coordinator through the use of an Inter-SC Trade submitted in the day-ahead market time frame.
