

## Well Permit Application Activities Update

### RECOMMENDATION:

None – item presented for informational purposes.

### SUMMARY/DISCUSSION:

The Well Permit Application Process is regulated by the Environmental Health Bureau (EHB). The Agency provides technical support to the EHB as part of the process. The changes that came about since the adoption of the 2010 County General Plan have caused concerns and misinformation in the public. To provide correct and up to date information to the public, Agency Staff has developed the attached Well Impact Evaluation Summary Table (Table).

The Table provides a summation of well permit applications that are being evaluated by Agency Staff, broken out by domestic well permit applications and high capacity well permit applications, as well as by Salinas Valley subarea. This table is provided to the BOD on a monthly basis.

In response to requests from Board members regarding data about construction of wells in the Pressure Deep Aquifer, Staff has also included a chart depicting the history of well installation in the Pressure Deep Aquifer (Figure). This chart, which includes both production and monitoring wells, indicates that a total of forty-three (43) wells have been installed in the Pressure Deep Aquifer since 1974, with thirteen (13) of those wells being constructed in the last ten years. An additional five (5) wells have been proposed for construction in the Pressure Deep Aquifer, but construction has not been completed as of the date of this report.
