Site Design and Runoff Reduction Checklist

Site Design and Runoff Reduction

Projects that create and/or replace > 2,500 square feet of impervious surface, collectively over the entire project site, including detached single-family home projects, shall implement all of the following *design strategies* in the design of the project:

Implemented

- ☒ Limited disturbance of creeks and natural drainage features
- ☒ Minimized compaction of highly permeable soils
- ☒ Limited clearing and grading of native vegetation at the site to the minimum area needed to build the project, allow access, and provide fire protection
- ☒ Minimized impervious surfaces by concentrating improvements on the least-sensitive portions of the site, while leaving the remaining land in a natural undisturbed state

And must minimize stormwater runoff by implementing one or more of the following *site design measures*:

Implemented

- ☐ Directed roof runoff into cisterns or rain barrels for reuse
- ☒ Directed roof runoff onto vegetated areas safely away from building foundations and footings, consistent with California building code
- ☐ Directed runoff from sidewalks, walkways, and/or patios onto vegetated areas safely away from building foundations and footings, consistent with California building code
- ☐ Directed runoff from driveways and/or uncovered parking lots onto vegetated areas safely away from building foundations and footings, consistent with California building code
- ☐ Constructed bike lanes, driveways, uncovered parking lots, sidewalks, walkways, and patios with permeable surfaces
