

necessary to effectively build reports and was implemented in 2014 to meet the requirements of Meaningful Use, as dictated by Centers of Medicare and Medicaid Services (CMS) and the Health Information and Technology for Economic Health Act (HITECH). Using electronic mapping and standard nomenclature is also critical for revenue recoupment with the required implementation of International Statistical Classification of Diseases and Related Health Problems (ICD-10).

MEDITECH, NMC's Electronic Health Record, has collaborated with IMO to incorporate IMO's mapping software Meditech. MEDITECH subsequently has required all Client/Server facilities, including NMC, to purchase IMO. MEDITECH is not accommodating other mapping and standard nomenclature vendors and IMO is the required vendor pursuant to MEDITECH's contracts and rules.

IMO provides mapping dictionaries that allow for user-friendly vocabularies that contain user-specific and familiar words and phrases, enabling clinicians and information management professionals to find and record the terms they need quickly and easily. IMO then crosslinks to required standardized vocabularies such as Systematized Nomenclature of Medicine (SNOMED) and ICD-9 and 10 codes that help to connect to the patient record, administrative information, academic references, and consumer information. IMO then allows for appropriate electronic mapping for decision support, billing, and information for providers and patients.

IMO 1.0 was successfully implemented in 2014. This amendment is to upgrade to the IMO 2.0 version of the software and maintenance for an additional year. IMO 2.0 is needed to meet Stage 3 of Meaningful Use by allowing the mapping of the Clinical Quality Measures. IMO 2.0 also offers new features and functionality that will help update, validate and identify issues in the mapped procedures.
