Eugene C. Doherty

laws and various building codes. Each property reviewed and or appraised along with the research for its "highest and best use" value including current and future developments, general plan updates, variations and special use permits. One has to research flood areas, hazardous waste issues, erosion, views, size, condition, history of ownership, current and future uses, economic viabilities of each project or property. An appraiser has to consider the cost value, income value and most of the sales comparison of the subject and surrounding parcels. He has to review existing and past and projected income and expenses. Of course there are many other factors that are considered while valuing and analyzing properties which would be too many to recite here.
