- 3.2.1 Audit functionality, known as the AuditMark®. For each ballot that is scanned and accepted into the unit, a corresponding ballot image is created and stored for audit purposes. The image consists of two parts described below.
- The top portion of the image contains a scanned image of the ballot.
 - The bottom portion consists of a machine-generated type-out showing each mark that the unit interpreted for that particular ballot. This is referred to as an AuditMark®.
- 3.3 **Democracy Suite EMS Software (Express)** consists of the following components:

The application uses tabulator results files and scanned images to allow election administrators to make adjudications to ballots with auditing and reporting capabilities. The Adjudication Application examines such voter exceptions as overvotes, undervotes, blank contests, blank ballots, write-in selections, and marginal marks. The application works in two basic modes: election project setup and adjudication. The Adjudication Application can be used in a multi-client environment. Adjudication Application eliminates the need to physically rescan ballots, which can potentially damage the originals and cause chain-of-custody concerns.
- 3.5 **ImageCast® X Application** is an application used for touchscreen voting on tablets at a voting location, and a Democracy Suite election database. Voting sessions are initiated on the tablet by either a Smart card or the entry of a numeric code based on activation. The ballot is loaded directly onto the standalone device. All voting activity is performed at the tablet, including accessible voting. Accessible voting interfaces connect to the tablet via an adapter that supports most accessible devices, allowing voters to bring their own device. After review and completion of the ballot selections, a paper ballot is created for the voter from a printer in the voting booth, and the ballot is cast after insertion in a ballot box. The paper ballot is the official ballot. The ballots contain a textual representation of the voter's ballot selections for visual review and confirmation, and the ballots are scanned using ImageCast Central Scanner and the results are accumulated in RTR.
